One of the most dramatic explorations of a German town in the grip of anti-Semitic passion ever written. In 1900, in a small Prussian town, a young boy was found murdered, his body dismembered, the blood drained from his limbs. The Christians of the town quickly rose up in violent riots to accuse the Jews of ritual murder—the infamous blood-libel charge that has haunted Jews for centuries. In an absorbing narrative, Helmut Walser Smith reconstructs the murder and the ensuing storm of anti-Semitism that engulfed this otherwise peaceful town. Offering an instructive examination of hatred, bigotry, and mass hysteria, *The Butcher's Tale* is a modern parable that will be a classic for years to come. Winner of the Fraenkel Award and a Los Angeles Times Best Book of 2002.

Building upon the success of previous volumes in the series, *Braking 2004-Vehicle Braking and Chassis Control* reflects the interaction of braking with the whole vehicle. Road vehicle braking behaviour experts, both from academia and industry, present the latest research and development devoted and applied to all aspects of braking, and report on field experiences with modern sophisticated systems. *Braking 2004* is essential reading for engineers and researchers from across a wide range of disciplines, from highway engineers and tyre specialists to experts in intelligent control systems, and including, of course the traditional foundation - brake specialists.

Originally published in 1985, the level of anxiety and suspicion between the USA and the USSR had rarely been higher. Many advocates of arms control believed that effective verification would reduce tensions and lessen the

risk of war. This book analyses the two main issues of verification. One is technological: what are the present capabilities of various verification techniques and what is their potential? The devices and methods currently employed by the two major nuclear powers and by international organizations to monitor the compliance of states with arms control or disarmament treaties are examined. The second issue is political: how do US and Soviet approaches compare, what are the roles of domestic and bureaucratic politics, and on what criteria can a workable standard of adequacy be based? In short, how much is enough? Although the study concludes that a number of significant arms control measures can already be adequately verified, modern weapons are becoming more mobile and it is becoming easier to conceal them. There is a danger that the ability to hide weapons will outstrip the ability to find them. Verification cannot promise to detect all violations; a workable standard of adequacy in verification must derive from the ability to detect militarily significant violations.
