Our Social World: Introduction to Sociology, Condensed, inspires students to develop their sociological imaginations, to see the world and personal events from a new perspective, and to confront sociological issues on a day-to-day basis. The award-winning author team of Jeanne H. Ballantine, Keith A. Roberts, and Kathleen Odell Korgen organizes the text around the "Social World Model," a conceptual framework that demonstrates the relationships among individuals (the micro level); organizations, institutions, and subcultures (the meso level); and societies and global structures (the macro level). The application of this model across chapters helps students practice using the three levels of analysis and view sociology as an integrated whole rather than a set of discrete subjects. The Fifth Edition of the Condensed version is adapted from Our Social World: Introduction to Sociology and is one-third shorter by streamlining boxes and the main narrative, and combining four chapters into two (Family/Education, and Politics/Economics).
New and Key Features A new full-length chapter on health, illness, and healthcare has been added. Several chapters have been reorganized with updated data, added studies, and newly emerging emphases in sociology. Six new "Sociologists in Action" features added. Four new "Engaging Sociology" features added with new opportunities for data analysis by students. 100 new or updated Tables and Figures, nearly 500 new references, and dozens of older references removed. Many sentences and definitions in the book have been revised for brevity and clarity, and the glossary has been updated for better correspondence with the text. Links to exceptional teaching resources from A.S.A.'s TRAILS (Teaching Resources and Innovation Library for Sociology) available in SAGE coursepacks. MCAT Guide maps chapter content to Foundational Concepts and Content Categories in Section 3 of the MCAT test available in SAGE coursepacks.

Originally published in 1992. This book brings together the work of a number of distinguished international researchers engaged in basic research on beginning reading. Individual chapters address various processes and problems in learning to read - including how acquisition gets underway, the contribution of story listening experiences, what is involved in learning to read words, and how readers represent information about written words in memory. In addition, the chapter contributors consider how phonological, onset-rime, and syntactic awareness contribute to reading acquisition, how learning to spell is involved, how reading ability can be explained as a combination of decoding skill plus listening comprehension skill, and what causes reading difficulties and how to study these causes.

The work of Eugen Ehrlich (1862-1922) is directly relevant for an understanding of law in society and of the role of sociology of law. Today, it is possible to see behind the smokescreen of historical debates and to assess Ehrlich's key ideas in the light of today's problems. The coexistence of state and local law still challenges lawyers and decision-makers. Ehrlich suggests sociology of law as an instrument to address social and legal problems that supplements standard legal methodology. The articles in this book place Eugen Ehrlich in the context of his times, outline the international reception of his work, and show the relevance of his thoughts for contemporary issues. First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

The Ehrlichs argue that the superconsumptive society will eventually collapse and that current leadership is not capable of reversing the process. Individuals can and should ensure their own sufficiency of food and energy while joining grassroots movements to alter society's behavior into a conserving mode.
