Sexual combat is not a monopoly of the human species. As Sarah Blaffer Hrdy argues in this spellbinding book, war between male and female animals has deep roots in evolutionary history. Her account of family life among hanuman langurs--the black-faced, gray monkeys inhabiting much of the Indian subcontinent--is written with force, wit, and, at times, sorrow. Male hanumans, in pursuit of genetic success, routinely kill babies sired by their competitors. The mothers of endangered infants counter with various stratagems to deceive the males and prevent destruction of their own offspring. Competition and selfishness are dominant themes of langur society. Competition among males for access to females, competition among females for access to food resources, and disregard by one female for the well-being of another's infant--these are some very common examples. Yet there are also moments of heroic self-sacrifice, as when an elderly female rushes to defend her troop and its babies from an invading, infanticidal male. *The Langurs of Abu* is the first book to analyze behavior of wild primates from the standpoint of both sexes. It is also a poignant and sophisticated exploration of primate behavior patterns from a feminist point of view. This book may inspire controversy; it will certainly be read with pleasure by anyone interested in animal behavior. Richly illustrated with photographs, seven in full color.

From practical to philosophical considerations, this succinct, clear presentation of medical malpractice issues is a valuable resource for the classroom and the reference shelf. Frank M. McClellan illustrates the multitude of considerations that impact the merit of each case, never losing sight of the importance of preserving human dignity in malpractice lawsuits. Early chapters urge the evaluation of legal, medical, and ethical standards, especially the Standard of Care. Part II focuses on assessing and proving compensatory and punitive damages, Part III sets out guidelines for intelligence gathering, medical research, choosing expert witnesses, and preparing for trial. Students of law, medicine, and public health, as well as lawyers and health care professionals, will find in *Medical Malpractice* a valuable text or reference book. "Problems" in twelve of the thirteen chapters illustrate the range of issues that can arise in malpractice suits. An appendix lists leading cases that have shaped medical malpractice law.

The Mesolithic of this region of Northern Italy is known through faunal remains and lithic material found within rockshelters and at open-air hunting camps and processing sites. This report provides a synthesis of the material and uses risk-based models to

assess long-term spatial and temporal changes from the Late Mesolithic to the Early Neolithic. These models assess the efficiency of tools for hunting and processing food, and the dietary and nutritional requirements implicit in subsistence changes.

What's in a name? Rather more than you might at first suspect, for names are steeped in history and myth and have much to tell us about our past, our beliefs - even our personality traits. The Penguin Pocket Dictionary of Babies' Names takes a close look at 3500 names, explaining origins and meanings, showing how some have changed in popularity and use over time and providing all the diminutive and variant forms. Part of Penguin's major new series of reference titles ranging from Spanish and French dictionaries to books on spelling and quotations.

First published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.
