Medical texts written in English during the late Middle Ages have in recent years attracted increasing attention among scholars. From approximately 1375 onwards, the use of English began to gain a firmer foothold in medical manuscripts, which in previous centuries had been written mainly in Latin or French. Scholars of Middle English, and editors of medical texts from late medieval England, are thus faced with a huge medical vocabulary which no single volume has yet attempted to define. This dictionary is therefore an essential reference tool. The material analysed in the Dictionary of Medical Vocabulary in English, 1375–1550 includes edited texts, manuscripts and early printed books, and represents three main types of medical writing: surgical manuals and tracts; academic treatises by university-trained physicians, and remedybooks. The dictionary covers four lexical fields: names of sicknesses, body parts, instruments, and medicinal preparations. Entries are structured as follows: (1) headword (2) scribal variants occurring in the texts (3) etymology (4) definition(s), each definition followed by relevant quotations (5) references to corresponding entries in the Dictionary of Old English, Middle English Dictionary, and The Oxford English Dictionary (6) references to academic books and articles containing information on the history and/or meaning of the term.

For the adapted edition, spelling follows Australian medical terminology conventions and Australian pronunciations are given. The free CD-ROM includes exercise and audio pronunciations, all of which are with an Australian accent.
