The study focuses on the investigation of the process during which raters of EFL written performance make their decisions. It consists of a pilot and a main study, each of which concentrates on assessment of writing. The rationale is to detect the decision-making processes that raters follow, which can be used for training raters, and with which the reliability of rating can be improved. The pilot study is based on data collected during a large-scale language proficiency assessment of two age groups from learners of English and German languages. Raters were asked to think aloud during the rating task. Data was then transcribed and analysed. The participants in the main study were novice raters, who produced verbal protocols. 37 EFL teacher trainees took part in rater training and practised think-aloud protocol production. Then, they evaluated ten compositions written by EFL learners and verbalised their thought processes. The verbal protocols served as a basis for data collection. The analysis of data resulted in the conclusion according to which more reliable and objective assessment is possible when evaluating written performance.

Language not only expresses identities but also constructs them. Starting from that point, Language and Identity examines the interrelationships between language and identities. It finds that they are so closely interwoven, that words themselves are inscribed with ideological meanings. Words and language constitute meanings within discourses and discourses vary in power. The powerful ones reproduce more powerful meanings, colonize other discourses and marginalize or silence the least powerful languages and cultures. Language and culture death occur in extreme cases of marginalization. This book also demonstrates the socio-economic opportunities offered by language choice and the cultural allegiances of language, where groups have been able to create new lives for themselves by embracing new languages in new countries. Language can be a 'double-edged sword' of opportunity and marginalization. Language and Identity argues that bilingualism and in some cases multilingualism can both promote socio-economic opportunity and combat culture death and marginalization. With sound theoretical perspectives drawing upon the work of Bakhtin, Vygotsky, Gumperz, Foucault and others, this book provides readers with a rationale to redress social injustice in the world by supporting minority linguistic and cultural identities and an acknowledgement that access to language can provide opportunity.

Reflecting the internationalization of the field of second language writing, this book focuses on political aspects and pedagogical issues of writing instruction and testing in a global context. High-stakes assessment impacts the lives of second language (L2) writers and their teachers around the world, be it the College English Test in China, Common Core-aligned assessments in the U.S., English proficiency tests in Poland, or the material conditions (such as access to technology, training, and other resources) affecting a classroom. With contributions from authors working in ten different countries in a variety of institutional contexts, the chapters examine the uses and abuses of various writing-related assessments, and the policies that determine their form and use. Representing a diverse range of contexts, methods, and disciplines, the authors jointly call for more equitable testing systems that consider the socioeconomic, psychometric, affective, institutional, and needs of all students who strive to gain access to education and employment opportunities related to English language proficiency. Pragmatics is the study of human communication: the choices speakers make to express their intended meaning and the kinds of inferences that hearers draw from an utterance in the context of its use. This Handbook surveys pragmatics from different perspectives, presenting the main theories in pragmatic research, incorporating seminal research as well as cutting-edge solutions. It addresses questions of rational and empirical research methods, what counts as an adequate and successful pragmatic theory, and how to go about answering problems raised in pragmatic theory. In the fast-developing field of pragmatics, this Handbook fills the gap in the market for a one-stop resource to the wide scope of today's research and the intricacy of the many theoretical debates. It is an authoritative guide for graduate students and researchers with its focus on the areas and theories that will mark progress in pragmatic research in the future.

Traditional classrooms are fast becoming a minority in the education field. As technologies continue to develop as a pervasive aspect of modern society, educators must be trained to meet the demands and opportunities afforded by this technology-rich landscape. The Handbook of Research on Teacher Education in the Digital Age focuses on the needs of teachers as they redesign their curricula and lessons to incorporate new technological tools. Including theoretical frameworks, empirical research, and best practices, this book serves as a guide for researchers, educators, and faculty and professional developers of distance learning tools.

Discussing digital technology in teaching and learning settings, Video Enhanced Observation for Language Teaching explains how it can be used to tag, analyze and evaluate talk and use it as the basis for reflection and professional development. Guiding readers through these processes, this book focusses on the Video Enhanced Observation (VEO) system. Beginning with a discussion of how it was designed and built by language teaching professionals, contributors use VEO to illustrate the advantages and opportunities of digital observation technologies for teachers, explaining its use and how it can be adapted to their own professional practice. With detailed case studies tracing how teachers in many different settings have used this system for recording, evaluating and reflecting on lessons, this book provides clear research evidence of the development of many education professionals from around the world. Written by experts in applied linguistics, education and educational technology, Video Enhanced Observation for Language Teaching explains the principles and procedures involved with using digital observation technologies in teaching, enabling other professionals to integrate these technologies into their own environment and practice.

Current interactional linguistic research appears to be crystallizing around systematic themes, which are all represented in this collection of papers. In the first section, where the relation between language and interaction is viewed from the perspective of language structure, several articles deal with the potential of a single structure for both turn and sequence construction, revealing a play-off between planned and occasioned syntax with potentially far-reaching consequences for language development. Other articles deal with lexical expressions as resources for the conduct of interaction, showing how they are heavily dependent on turn position and sequential context for their meaning potential. In the second section, with a view from the perspective of the interactional order, a systematic focus of interest lies on three different conversational tasks: projecting turn and turn-unit completion, starting up turns with 'non-beginnings' and self-repairing. The cross-linguistic studies here all agree that common interactional tasks may well be carried out by quite different

linguistic practices and that these practices are dependent to a certain extent on language features which are typologically distinct.

#### Publisher Description

This volume reports research that informs the development of reading and listening assessment in IELTS. This volume brings together a set of eight IELTS-related research studies - four on reading and four on listening - conducted between 2005 and 2010. Findings from these studies provide valuable evidence on the validity, reliability, impact and practicality of the IELTS test; they are also instrumental in highlighting aspects needing attention, and thus directly inform the continuing evolution of the IELTS reading and listening tests. The volume reviews and comments on the specific contribution of each study to the ongoing process of IELTS reading and listening test design and development.

"This guide provides a comprehensive toolkit for the complex work of field instruction, including mentoring approaches; conversation stems; conferencing techniques; lesson debriefing questions; understandings of programmatic goals; observation, assessment, and feedback methods; and more. Chapters are accessibly written and filled with concrete examples, tips, worksheets, and activities"--

This book uses Conversation Analysis methodology to analyze rhetorical and other questions that are designed to convey assertions, rather than seek new information. It shows how these question sequences unfold interactionally in naturally-occurring talk in a variety of settings, e.g., friends arguing over the phone, parents disciplining children, news interviews, and second language writing conferences. The questions are used across these widely different contexts to perform a number of related social actions such as accusations, challenges to prior turns, and complaints. Those used in institution settings, such as teacher-student conferences, orient to institutional norms and roles and can help accomplish institutional goals, e.g., eliciting student error correction. Both the interactional context in which these questions are embedded and the known epistemic authority of the questioner play a role in our understanding of these questions, i.e., what social actions the question is accomplishing in a particular interaction.

This volume introduces the theoretical and empirical bases for defining English language learning levels in terms of criterial features.
