A concise edition of the highly acclaimed Oxford Companion to the Book, this book features the 51 articles from the Companion plus 3 brand new chapters in one affordable volume. The 54 chapters introduce readers to the fascinating world of book history. Including 21 thematic studies on topics such as writing systems, the ancient and the medieval book, and the economics of print, as well as 33 regional and national histories of 'the book', offering a truly global survey of the book around the world, the Oxford History of the Book is the most comprehensive work of its kind. The three new articles, specially commissioned for this spin-off, cover censorship, copyright and intellectual property, and book history in the Caribbean and Bermuda. All essays are illustrated throughout with reproductions, diagrams, and examples of various typographical features. Beautifully produced and hugely informative, this is a must-have for anyone with an interest in book history and the written word.

This book examines in depth the form that ultraroyalism took in Toulouse.

In his essay on Idealism and naturalism in Gothic sculpture and painting, art is no longer an

autonomous phenomenon, but the expression of a 'world view'. The history of art is no longer seen as an unbroken chain of development, but rather as a dialectic process impelled by the 'contrast between the ideational and the material' (Gegensatz zwischen Geist und Materie). Now Dvořák assigned equal importance to naturalism and to its opposite, the fundamentally idealistic character of Gothic art, which he had still vehemently denied in 1904. -Excerpt from the essay Max Dvořák and the History of Medieval Art by Hans H. Aurenhammer (see link below).

Raised with limited peer interaction, Ernestine St Bennett has difficulty interpreting social cues. At twenty-five she's become a loner; a shy nerd immersed in her scientific studies, whose best friend is her pet fish, Waldo. Then Ernestine meets Simon Prime, who's obviously a nerd, too! Sympathizing with his social dysfunction, Ernie decides to help poor Simon increase his self-esteem and thus enhance his social standing. Using principles learned in her fish studies, she'll simply turn Simon from meek to macho. What Ernestine doesn't know (but Waldo suspects) is that Simon Prime is really ex-cop, private investigator Sam Pierce in disguise. A man who definitely doesn't need his masculinity enhanced!

"Power Electronics in Smart Electrical Energy Networks" introduces a new viewpoint on power electronics, re-thinking the basic philosophy governing electricity distribution systems. The proposed concept fully exploits the potential advantages of renewable energy sources and distributed generation (DG), which should not only be connected but also fully integrated into the distribution system in order to increase the efficiency, flexibility, safety, reliability and quality of the electricity and the networks. The transformation of current electricity grids into smart (resilient and interactive) networks necessitates the development, propagation and demonstration of key enabling cost-competitive technologies. A must-read for professionals in power engineering and utility industries, and researchers and postgraduates in distributed electrical power systems, the book presents the features, solutions and applications of the power electronics arrangements useful for future smart electrical energy networks.

Our colleagues from the French-speaking parts of Switzerland - the Suisses romands - and above all the committee of the 3rd Cycle, e Earth Sciences (3 Cycle, Sciences de la Terre) honored us by asking us to give a course on Isotope Geology for the year 1977. The course, entitled Evaluation et Interpretation des Donnees Isotopiques (evaluation and Interpretation of Isotopic Data), was intended to inform earth scientists, graduate and postgraduate, from the western Swiss Universities on the subject of Isotope Geology. Such courses usually consist of two parts: lectures and excursions. Thus, in March 1977, we gave such a two-week course at the Mineralogical Institute of the University of Berne. The first week was devoted essentially to the methods of dating, the second week to the behavior of stable isotopes. In July 1977, on the occasion of an excursion to the Central and Western Alps, we were able to demonstrate our results. Guest professors were invited to make contributions to the course.
