Thirteen years have gone by since the first international meeting on Animal Sonar Systems was held in Frascati, Italy, in 1966. Since that time, almost 900 papers have been published on its theme. The first symposium was vital as it was the starting point for new research lines whose goal was to design and develop technological systems with properties approaching optimal biological systems. There have been highly significant developments since then in all domains related to biological sonar systems and in their applications to the engineering field. The time had therefore come for a multidisciplinary integration of the information gathered, not only on the evolution of systems used in animal echolocation, but on systems theory, behavior and neurobiology, signal-to-noise

ratio, masking, signal processing, and measures observed in certain species against animal sonar systems. Modern electronics technology and systems theory which have been developed only since 1974 now allow designing sophisticated sonar and radar systems applying principles derived from biological systems. At the time of the Frascati meeting, integrated circuits and technologies exploiting computer science were not well enough developed to yield advantages now possible through use of real-time analysis, leading to, among other things, a definition of target temporal characteristics, as biological sonar systems are able to do. All of these new technical developments necessitate close cooperation between engineers and biologists within the framework of new experiments which have been designed, particularly in the past five years.

“It takes no courage to sign up as a Protestant.” These words open this bold new text - the summa of David Wells's critique of the evangelical landscape -- leaving no doubt that Wells is issuing a challenge to the modern church. This book is a broadside against “new” versions of evangelicalism as well as a call to return to the historic faith, one defined by Reformation solas (grace, faith, and scripture alone), and to a reverence for doctrine. Wells argues that the historic, classical evangelicalism is one marked by doctrinal seriousness, as opposed to the new movements of the marketing church and the emergent church. He

energetically confronts the marketing communities and what he terms their “sermons-from-a-barstool and parking lots and aprÃ’s-worship Starbucks stands.” He also takes issue with the most popular evangelical movement in recent years -- the emergent church. Emergents are postmodern and postconservative and postfoundational, embracing a less absolute, understanding of the authority of Scripture than Wells maintains is required. The Courage to be Protestant is a dynamic argument for the courage to be faithful to what biblical Christianity has always stood for, thereby securing hope for the church's future.

This book proposes a revisionist approach to democratic politics. Yaron Ezrahi focuses on the creative unconscious collective imagination that generates ever-changing visions of legitimate power and authority, which compete for enactment and institutionalization in the political arena. If, in the past, political authority was grounded in fictions such as the divine right of kings, the laws of nature, historical determinism and scientism, today the space of democratic politics is filled with multiple alternative social imaginaries of the desirable political order. Exposure to electronic mass media has made contemporary democratic publics more aware that credible popular fictions have greater impact on shaping our political realities than do rational social choices or moral arguments. The pressing political question in contemporary democracy is, therefore, how to select and enact political fictions that promote peace and how to found the political order on checks and balances between alternative political imaginaries of freedom and justice.

From England's Anarchy to the slaughter of the Albigensian Crusade, Kings, nobles and clergy all vied for power and wealth. Dante Branson's life is a perilous tightrope walk between the light that shines on a world of virtue and promise and the darkness that constantly calls out to his reckless and unruly nature. His journey is beset on all sides by an assortment of individuals hoping to sway him in one direction or the other. But when the unthinkable happens it will be left up to Dante alone to decide on which side of the line his destiny truly lies.

In early modern England, religious sorrow was seen as a form of spiritual dialogue between the soul and God, expressing how divine grace operates at the level of human emotion. Through close readings of both Protestant and Catholic poetry, Kuchar explains how the discourses of 'devout melancholy' helped generate some of the most engaging religious verse of the period. From Robert Southwell to John Milton, from Aemilia Lanyer to John Donne, the language of 'holy mourning' informed how poets represented the most intimate and enigmatic aspects of faith as lived experience. In turn, 'holy mourning' served as a way of

registering some of the most pressing theological issues of the day. By tracing poetic representations of religious sorrow from Crashaw's devotional verse to Shakespeare's weeping kings, Kuchar expands our understanding of the interconnections between poetry, theology and emotion in post-Reformation England.

One problem with helicoptering is that there are virtually no flying clubs, at least of the sort that exist for fixed wing, so pilots get very little chance to swap stories, unless they meet in a muddy field somewhere, waiting for their passengers. As a result, the same mistakes are being made and the same lessons learnt separately instead of being shared - it's comforting sometimes to know that you're not the only one to inflate the floats by accident! Even when you do get into a school, there are still a couple of things they don't teach you, namely that aviation runs on paperwork, and how to get a job, including interview techniques, etc - flying the aircraft is actually less than a third of the job. Another is that nobody really tells you anything, either about the job you have to do (from the customer) or how to do it (the company) - you will always be up against the other guy who managed to do it last week! Sure, there will be training, but, even in the best companies, this will be relatively minimal. This book is an attempt to correct the above situations by gathering together as much information as possible for

helicopter pilots, old and new, professional and otherwise, in an attempt to explain the why, so the how will become easier (you will be so much more useful if you know what the customer is trying to achieve). In short, this is all the stuff nobody taught me - every tip and trick I have learnt has been included.

When your body gets used to a specific workout program, it loses its effectiveness. For example if you do sit-ups every day in a month and increase the number of reps as days pass, not only it doesn't help your body to burn fats and build muscles, but it makes this exercise easy for your body and it loses its effectiveness. If you always get your body in to new challenges and learn more exercises, for sure, your body is going to be fit. In this book we challenge you and your body to new workouts and exercises. All of the body parts, legs, abs, and upper body... have been categorized in their own section and each section consists of steps. Each step is different from each other and is a challenge for you. Linker design is an expanding field with an exciting future in state-of-the-art organic synthesis. Ever-increasing numbers of ambitious solution phase reactions are being adapted for solid-phase organic chemistry and to accommodate them, large numbers of sophisticated linker units have been developed and are now routinely employed in solid-phase synthesis. Linker Strategies in Solid-Phase Organic Synthesis guides the reader through the evolution of linker units from their genesis in solid-supported peptide chemistry to the cutting edge diversity linker units that are defining a new era of solid

postgraduates, and organic chemists with an interest in leading-edge developments in their field.

The first of its kind, this reference gives a comprehensive but concise introduction to epigenetics before covering the many interactions between hormone regulation and epigenetics at all levels. The contents are very well structured with no overlaps between chapters, and each one features supplementary material for use in presentations.

Throughout, major emphasis is placed on pathological conditions, aiming at the many physiologists and developmental biologists who are familiar with the importance and mechanisms of hormone regulation but have a limited background in epigenetics.

Language and Conscious Experience is a philosophical theory of consciousness. The book presents a theory that accommodates every aspect of consciousness and conscious experience. The aspects referred to are perception, imagery including memory and dreams, feelings (emotion) and the acquisition and development of language including the origination of meaning. The nature of consciousness is the energies detected by sensory receptors. The nature of conscious experience is the detection by spindle receptors of energies developed and enhanced in intrafusul muscle spindles. We experience the environment in the form of sensations: sight,

hearing, taste, smell, and touch, to use the common and traditional identifications. Consciousness is experienced by the detection of intrafusal muscle spindles. The spindle receptor detection is analogous to the detection of the environment by sensory receptors. The difference, of course, is that we are conscious as the detection of the intrafusal spindles. The purpose of the neuromuscular system is response to the energies of the environment. The purpose of the intrafusal spindles is to control the neuromuscular system. Efferent impulse activity from synaptic activity enhances the intrafusal spindles that can then be detected as conscious experience. Energies developed in the intrafusal spindles are determined by the innervation of the system. When enhanced from configured synaptic activity the innervation is modified by the synaptic activity configured by experience.
