The purpose of this manual is to provide clear and helpful information for maintaining gravel roads. Very little technical help is available to small agencies that are responsible for managing these roads. Gravel road maintenance has traditionally been "more of an art than a science" and very few formal standards exist. This manual contains guidelines to help answer the questions that arise concerning gravel road maintenance such as: What is enough surface crown? What is too much? What causes corrugation? The information is as nontechnical as possible without sacrificing clear guidelines and instructions on how to do the job right.

Over 1,700 total pages ... INTRODUCTION Today's operational environment presents threats the Army has not faced in nearly 20 years. Against peer competitors, the joint force may face air parity or even localized enemy air overmatch, challenging the assumption of air superiority the joint force has held since the Korean War. This will make maneuver forces vulnerable to air attack by fixed- and rotary-wing aircraft, unmanned aircraft systems, and cruise missiles.

Maneuver forces lack capacity and capability to address these threats and the Army requires a speedy response. Stinger missiles provide a key capability for maneuver forces to defend themselves from aerial observation and attack. However, without direct involvement from senior brigade combat team leaders and effective leader training, these missiles will become dead weight at best or a fratricide in waiting at worst. Units must plan effectively to utilize this capability and ensure it ties directly to their scheme of maneuver as opposed to simply task-organizing one Stinger team per company.
