Writing the perfect complement to their bestseller, *Introducing Public Administration*, Shafritz and Borick highlight the great drama inherent in public policy -- and the ingenuity of its makers and administrators -- in this new casebook that brings thrilling, true life adventures in public administration to life in an engaging, witty style. Drawing on a unique assortment of literary, historic, and modern examples, *Cases in Public Policy and Administration* exposes students to public administration in practice by telling the tales of: How Thurgood Marshall led the legal fight for civil rights and made it possible for Barack Obama to become president How the ideas of an academic economist and a famous novelist led to the recession that started in 2008 How Al Gore really deserves just a little bit of credit for inventing the Internet How the decision was made by President Harry Truman to drop the first atomic bomb on Japan in order to end World War II How the current American welfare state was inspired by a German chancellor How a Nazi war criminal inadvertently provided the world with a lesson in bureaucratic ethics How Napoleon Bonaparte encouraged the job of chief of staff to escape from the military and live in contemporary civilian offices How an obscure state department bureaucrat wrote the policy of containment that allowed the United States to win the Cold War with the Soviet Union How Dwight D. Eisenhower was started on the road to the presidency by a mentor he found in the Panamanian rain forest How Florence Nightingale gathered statistics during the Crimean War that helped lead to contemporary program evaluation.

A complete collection of some of President George W. Bush's most memorable speeches during his presidency. The 9/11 Commission Report Final Report of the National Commission on Terrorist Attacks Upon the United States Cosimo, Inc.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

"First, in the last few years, data collection has migrated quickly to online approaches, and by 2019 represented more than 60 percent of all data collection methods. The movement to online methods of data collection has necessitated the addition of considerable new material on this topic. The chapters on sampling, measurement and scaling, questionnaire design, and preparation for data analysis all required new guidelines on how to deal with online related issues. Social media monitoring and marketing research online communities are expanding research methods and are addressed in our chapter on qualitative and observational research. Second, to enhance student analytical skills we added additional variables on social media activities to the continuing case on the Santa Fe Grill and Jose's Southwestern Café. Also, there is now a separate data set based on a survey of the employees of the Santa Fe Grill. Findings of the Santa Fe Grill customer and employee data sets are related and can be compared qualitatively to obtain additional insights. The competitor data for the continuing case enables students to make comparisons of customer experiences in each of the two restaurants and to apply their research findings in devising the most effective marketing strategies for the Santa Fe Grill. We also added a new data set in Chapter 13 on communicating marketing research findings. The data set reflects the attitudes and opinions of students in our classes about advertising and types of

Pharmacognosy is a term derived from the Greek words for drug (pharmakon) and knowledge (gnosis). It is a field of study within Chemistry focused on natural products isolated from different sources and their biological activities. Research on natural products began more than a hundred years ago and has continued up to now with a plethora of research groups discovering new ideas and novel active constituents. This book compiles the latest research in the field and will be of interest to scientists, researchers, and students.

All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

After 9/11, which triggered a global debate on public diplomacy, 'PD' has become an issue in most countries. This book joins the debate. Experts from different countries and from a variety of fields analyze the theory and practice of public diplomacy. They also evaluate how public diplomacy can be successfully used to support foreign policy.

Political parties, interest groups, and candidate campaigns all pursue similar goals in presidential elections: each entity attempts to mobilize voters. However, the regulatory environment often prevents these groups from coordinating their efforts. With participants playing by new rules mandated by the Bipartisan Campaign Reform Act, the 2004 presidential election included previously unseen configurations and alliances between political actors. In some campaign situations, the resulting 'dance' was carefully choreographed. In others, dancers stepped on each other's toes. In still others, participants could only eye each other across the floor. *Dancing without Partners* intensively analyzes the relationships among candidates, political parties, and interest groups under the BCRA's new regulations in the 2004 election cycle in five battleground states. The chapters assess the ways in which the rules of the game have changed the game itself—and also how they haven't. The result is a book that will be invaluable to researchers and students of presidential elections. It is in the Middle East that the U.S. has been made to confront its attitudes on the use of force, the role of allies, and international law. The history of the U.S. in the Middle East, then, becomes an especially revealing mirror on America's

view of its role in the wider world. In this wise, objective, and illuminating history, Lawrence Freedman shows how three key events in 1978–79 helped establish the foundations for U.S. involvement in the Middle East that would last for thirty years, without offering any straightforward or bloodless exit options: the Camp David summit leading to the Israel-Egypt Treaty; the Iranian Islamic revolution leading to the Shah's departure followed by the hostage crisis; and the socialist revolution in Afghanistan, resulting in the doomed Soviet intervention. Freedman makes clear how America's strategic choices in those and subsequent crises led us to where we are today. *A Choice of Enemies* is essential reading for anyone concerned with the complex politics of the region or with the future of American foreign policy.

*Judging Bush* incorporates the diverse voices of presidential scholars, policy experts, and members of past administrations to present a balanced and systematic initial evaluation of the two terms of George W. Bush.

“As technology threatens to displace countless jobs and skills, the ability to communicate is becoming more important than ever. This book is full of examples to help you get better at transporting your thoughts and emotions into the minds of other people.” —Adam Grant, New York Times bestselling author of *Give and Take*, *Originals*, and *Option B* with Sheryl Sandberg  
*How to master the art of persuasion—from the bestselling author of Talk Like TED. Ideas don't sell themselves. As the forces of globalization, automation, and artificial intelligence combine to disrupt every field, having a good idea isn't good enough. Mastering the ancient art of persuasion is the key to standing out, getting ahead, and achieving greatness in the modern world. Communication is no longer a “soft” skill—it is the human edge that will make you unstoppable, irresistible, and irreplaceable—earning you that perfect rating, that fifth star. In Five Stars, Carmine Gallo, bestselling author of Talk Like TED, breaks down how to apply Aristotle's formula of persuasion to inspire contemporary audiences. As the nature of work changes, and technology carries things across the globe in a moment, communication skills become more valuable—not less. Gallo interviews neuroscientists, economists, historians, billionaires, and business leaders of companies like Google, Nike, and Airbnb to show first-hand how they use their words to captivate your imagination and ignite your dreams. In the knowledge age—the information economy—you are only as valuable as your ideas. Five Stars is a book to help you bridge the gap between mediocrity and exceptionality, and gain your competitive edge in the age of automation. In Five Stars, you will also learn:*

- The one skill billionaire Warren Buffett says will raise your value by 50 percent.
- Why your job might fall into a category where 75 percent or more of your income relies on your ability to sell your idea.
- How Airbnb's founders follow a classic 3-part formula shared by successful Hollywood movies.
- Why you should speak in third-grade language to persuade adult listeners.
- The one brain hack Steve Jobs, Leonardo da Vinci, and Picasso used to unlock their best ideas.

It has, improbably, been called uncommonly lucid, even riveting by The New York Times, and it was a finalist for the 2004

National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States—which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean—it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts—it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7—it is nevertheless an essential record of one of the most transformational events of modern times.
