Extra-grammatical morphology is a hitherto neglected area of research, highly marginalised because of its irregularity and unpredictability. Yet many neologisms in English are formed by means of extra-grammatical mechanisms, such as abbreviation, blending and reduplication, which therefore deserve both greater attention and more systematic study. This book analyses such phenomena.

This clear and lively introduction to probability theory concentrates on the results that are the most useful for applications, including combinatorial probability and Markov chains. Concise and focused, it is designed for a one-semester introductory course in probability for students who have some familiarity with basic calculus. Reflecting the author's philosophy that the best way to learn probability is to see it in action, there are more than 350 problems and 200 examples. The examples contain all the old standards such as the birthday problem and Monty Hall, but also include a number of applications not found in other books, from areas as broad ranging as genetics, sports, finance, and inventory management.

Peter Newmark's third book is an attempt to deepen and extend his views on translation. He goes easy on theories and models and diagrams and offers a few correlative statements to assist translators in finding a variety of options and in making their decisions.

"Hormegeddon" is the term coined by entrepreneur and New York Times Bestselling Author Bill Bonner to describe what happens when you get too much of a good thing in the sphere of public policy, economics and business. Simply put, it ends in disaster. Drawing on stories and examples from throughout modern political history-from Napoleon's invasion of Russia to the impending collapse of the American healthcare system, from the outbreak of WWII and the fall of the Third Reich to the 21st century War on Terror, from the Great Recession to the sovereign debt crisis-Bonner pursues a modest ambition: to understand what goes wrong. History is not a clean yarn spun by its victors. It is a long tale of things that went FUBAR-debacles, disasters, and catastrophes. That each disaster carries with it a warning is what makes it useful to study. For instance, if the architect of a great ship tells you that 'not even God himself could sink this ship, ' you should take the next boat. If the stock market is selling at 20 times earnings and all the expert analysts urge you to 'get in' because you 'can't lose'-it's time to get out! Similarly, public policy disasters are what you get when well meaning people with this same Titanic degree of certitude apply rational, small-scale problem-solving logic to inappropriately large scale planning. First, you get a declining rate of return on your investment (of time or resources) until you hit zero. Then, if you keep going through the zero floor-and you always keep going-you get a disaster. The problem is, these disasters cannot be stopped by well-informed smart people with good intentions, because they are the people who cause them in the first place. From the mind of Bill Bonner comes Hormegeddon, a phenomenon that occurs when a small dose of something produces a favorable result, but if you increase the dosage, the results end in disaster. The same applies when the world gets too much of a good thing in public policy, economics, and business. Drawing on examples throughout modern
