This edition of the Guide contains three major sections: the narrative text; a Resource Directory, which provides addresses and telephone numbers of organizations referenced in the text; and the Directory of Licensed and Permits, which lists all business licenses and permits required by the State of Minnesota, the state agency which issues or administers the license or permit, and a telephone number for obtaining more information. Topics presented in the narrative text are presented in the order in which the new business owner typically must address them."--Preface

Under the bright lights of the Strip, another world exists, one where dancers live beside professionals who can't afford a place to live—or don't want to be found—in one of the world's most famous cities. Corridors of sleeping areas are separated from communal food sections, heat and water allocated. It is the community of the water sewers, nearly three hundred miles of tunnels existing below Las Vegas. Attorney Shay Wilson has worked her way from a single wide trailer to UNLV where she graduated top of class, taking a job at the top trust and estates firm in town. One day, she will open her own firm, one proudly displaying her name. But her dreams aren't forthcoming. New clients are taken by the law firms female managing partner, her rent has increased and her pride prevents her from asking her surrogate father for money. Uncompromising, she returns to bartending a few nights a week at the hottest club in town, new clients follow, as do designer clothes and a luxury apartment on the strip. Yet as her success increases, so does the number of lawyers dying in roadway accidents. Stolen goods, money laundering and human trafficking are no longer jokes said at law school, but real activities. Falling in love with a detective who believes she may be a suspect, and avoiding a clothing executive convinced she is fencing his stolen products, she must keep her job, prove her innocence and learn the truth before she becomes one more dead attorney.

Development Matrix describes the process in a two-dimensional model and presents seven Development Stages which form the horizontal axis, and eight sets of Development Tasks which form the vertical axis to define a 56-cell matrix. In each cell, money is spent and risks are taken to achieve certain tasks and thereby create (or destroy) value. This holistic process considers the entire life cycle of real estate from its "green field" inception to its "brown field" state. The book is written by a real estate developer and academic, and the presented material is conceptual, practical, and non-technical. Jargon has been minimized as much as possible as the author introduces an entirely new model for real estate development that is both academically authoritative and developed in practice. It is aimed at a general professional audience participating in the development process, but equally the book is ideal for use as a textbook in undergraduate and graduate courses in real estate development, and an excellent supplemental text for business courses discussing real estate finance and investment. It may also be used as a textbook for professional courses, workshops, or seminars in real estate development. The book is supported by an interactive website at <http://realestatedevelopmentmatrix.com/> This comprehensive reference book has been updated to reflect the country's gradually recovering real estate market. It covers virtually every aspect of buying and selling, understanding mortgages, analyzing real estate investment opportunities, getting and understanding appraisal reports, and more. This open access book addresses the issue of diffusing sustainable energy access in low- and middle-income contexts. Access to energy is one of the greatest challenges for many people living in low- income and developing contexts, as around 1.4 billion people lack access to electricity. Distributed Renewable Energy systems (DRE) are considered a promising approach to address this challenge and provide energy access to all. However, even if promising, the implementation of DRE systems is not always straightforward. The book analyses, discusses and classifies the promising Sustainable Product-Service System (S.PSS) business models to deliver Distributed Renewable Energy systems in an effective, efficient and sustainable way. Its message is supported with cases studies and examples, discussing the economic, environmental and socioethical benefits as well as its limitations and barriers to its implementation. An innovative design approach is proposed and a set of design tools are supplied, enabling readers to create and develop Sustainable Product-Service System (S.PSS) solutions to deliver Distributed Renewable Energy systems. Practical applications of the book's design approach and tools by companies and practitioners are discussed and the book will be of interest to readers in design, industry, governmental institutions, NGOs as well as researchers.
