The first illustrated guide that makes finance fun and accessible, Napkin Finance can help even the most numbers-phobic reader learn about complex financial topics without dying of boredom. Surveys have found that two thirds of Americans can't pass a basic financial literacy test, and nine in ten believe personal finance should become a required high school course. Tina Hay understands the confusion. While attending Harvard Business School, she struggled to keep up with classmates-many of whom came from the banking world-when it came to understanding jargon and numbers-heavy concepts. Tina developed a visual learning strategy using sketches and infographics that helped her succeed in her studies and master even the most complex financial topics. Since then, Tina founded Napkin Finance, a thriving company built on the concept of taking seemingly overwhelming topics--such as budgeting, investments, and retirement accounts--and turning them into simple, skimmable explanations. Now, she's synthesized the most important content into this personal finance handbook. Napkin Finance includes dozens of individual learning modules, on topics ranging from credit scores to paying off student loans to economics and blockchain. A handy crash course in personal finance, Napkin Finance is the groundbreaking guide everyone needs to help them manage their money and feel more secure.

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of

finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

The psychological dimension of managing risk is of crucial importance, and its

study has led to the identification of specific do's and don'ts. Those with an understanding of the psychology underlying risk and the skills to recognize its manifestation in practice, have the opportunity to develop frameworks that embody the do's and don'ts, thereby producing sound judgments and good decisions. Those lacking the understanding and the skills are destined to be more hit and miss in their approach to risk management, doing the don'ts and not doing the do's. Virtually every major risk management catastrophe in the last fifteen years has psychological pitfalls at its root. The list of catastrophes includes the 2008 bankruptcy of Lehman Brothers and subsequent global financial crisis, the 2010 explosion at BP's Macondo well in the Gulf of Mexico and the 2011 nuclear meltdown at the Fukushima Daiichi power plant. A critical lesson from psychological studies for those involved in risk management is that people's judgments and decisions about risk vary with type of circumstance. In Behavioral Risk Management readers will learn that there are specific actions that organizations can undertake to incorporate understanding, recognition, and behavioral interventions into the practice of risk management. There are many examples throughout the book that illustrate doing the don'ts. The chapters in the first part of the book introduce the main ideas, and the chapters in the latter part provide insight into how to apply those ideas to the practical world in which risk managers operate.

While investing theories introduced decades ago have been repeatedly validated and have stood the test of time, our understanding of the financial markets has made huge advances in recent years. To benefit from these advances, however, most investors will need to unlearn much of what they think they know about investing. They will also need to learn to ignore most of the "wisdom" that spews from the hallowed halls of Wall Street, its salesmen posing as "advisors," and its agents in the media. Contrary to popular "wisdom," investing isn't about P/E ratios, or technical patterns, or momentum plays, or "5 star ratings," or the latest conflict in the Middle East. Investing is about probabilities and statistics: It's about maximizing the probability of meeting the goals you have set for the only life you have to live on this planet; it's about avoiding the (many) risks that have negative expected payoffs; and it's about exposing yourself only to those risks that have positive expected payoffs - and then, only to the extent that taking those risks buys you something of value (like a secure retirement, or a cabin in the woods). In investment management, there "IS" a right answer. There "IS" a best way to invest. There "IS" a proven methodology based on objective research which can vastly improve your odds of investment success. Most who take the time to review the research will significantly increase the probability of achieving their most valued financial goals, significantly decrease the level of risk in their portfolios and, ultimately, get more out of this grand experiment called life. Learn the basics of investing with this approachable guide to the world of finance *Clever Girl Finance: Learn How Investing Works, Grow Your Money* is the leading guide for women who seek to learn the basic foundations of personal

Within a simple logical framework, axioms are first highlighted and the implications of these important concepts are studied. These implications are used to answer questions about corporate finance, including issues related to derivatives pricing, state price probabilities, dynamic hedging, dividends, capital structure decisions, and risk and incentive management. Numerical examples are provided, and the mathematics is kept simple throughout.

How many senior executives and managers are able to reach the top with little or no financial training? They may have been appointed to the executive board as a result of their expertise in marketing, HR, sales or IT, yet every board member has a responsibility to make informed decisions on proposed financial actions - decisions which inevitably affect the value of their business. Offering straightforward and practical advice, *Creating Financial Value* will equip those who are not financial specialists with the necessary knowledge not only to contribute fully to important discussions on policy and strategy, but also to develop sound business proposals, or to competently cross-examine the proposals of others. Through examples from a range of business disciplines, the book explains in simple, digestible terms how a business creates financial value, and how a non-financial manager can confidently take an active role in the process. Once read, the book will provide an essential resource that can be referenced time and again. Malcolm Allitt punctures the myths surrounding 'shareholder value' and looks behind the finance jargon to define the boundaries between what a non-specialist should know and when it is good practice to seek the advice of financial specialists. This book is key reading for anyone from a non-financial background who wants to execute their increasingly broad responsibilities competently and confidently, without the need to become experts themselves.
