Edmonds: Fundamental Financial Accounting Concepts is a unique entrant in the college market that fits a growing audience of non-accounting majors, yet provides a solid foundation in accounting principles for future accounting students. The Edmonds approach, which focuses on core concepts within a decision-making context, better prepares future managers for the corporate world in which they will be users of financial information. It is a conceptually based book that stresses meaningful learning over rote memorization. More specifically, the text focuses on the relationships between business events and financial statements. Did the event cause assets to increase, decrease, or stay the same? Similarly, what was its effect on liabilities, equity, revenue, expense, gains, losses, net income, and dividends? Furthermore, how did the event affect cash flow? These are the big picture relationships that both accounting majors and general business students need to understand to function effectively in the business world. The text contains numerous innovative features that are designed to facilitate the students' comprehension of the events affecting financial statements.

This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).
