Lexical Priming proposes a radical new theory of the lexicon, which amounts to a completely new theory of language based on how words are used in the real world. Here they are not confined to the definitions given to them in dictionaries but instead interact with other words in common patterns of use. Using concrete statistical evidence from a corpus of newspaper English, but also referring to travel writing and literary text, the author argues that words are 'primed' for use through our experience with them, so that everything we know about a word is a product of our encounters with it. This knowledge explains how speakers of a language succeed in being fluent, creative and natural.

The Industrial Revolution, powered by oil and other fossil fuels, is spiraling into a dangerous endgame. The price of gas and food are climbing, unemployment remains high, the housing market has tanked, consumer and government debt is soaring, and the recovery is slowing. Facing the prospect of a second collapse of the global economy, humanity is desperate for a sustainable economic game plan to take us into the future. Here, Jeremy Rifkin explores how Internet technology and renewable energy are merging to create a powerful "Third Industrial Revolution." He asks us to imagine hundreds of millions of people producing their own green energy in their homes, offices, and factories, and sharing it with each other in an "energy internet," just like we now create and share information online. Rifkin describes how the five-pillars of the Third Industrial Revolution will create thousands of businesses, millions of jobs, and usher in a fundamental reordering of human relationships, from hierarchical to lateral power, that will impact the way we conduct commerce, govern society, educate our children, and engage in civic life. Rifkin's vision is already gaining traction in the international community. The European Union Parliament has issued a formal declaration calling for its implementation, and other nations in Asia, Africa, and the Americas, are quickly preparing their own initiatives for transitioning into the new economic paradigm. The Third Industrial Revolution is an insider's account of the next great economic era, including a look into the personalities and players — heads of state, global CEOs, social entrepreneurs, and NGOs — who are pioneering its implementation around the world.

This Element provides a basic introduction to sentiment analysis, aimed at helping students and professionals in corpus linguistics to understand what sentiment analysis is, how it is conducted, and where it can be applied. It begins with a definition of sentiment analysis and a discussion of the domains where sentiment analysis is conducted and used the most. Then, it introduces two main methods that are commonly used in sentiment analysis known as "supervised machine-learning" and "unsupervised learning (or lexicon-based)" methods, followed by a step-by-step explanation about how to perform sentiment analysis with R. The Element then provides two detailed examples or cases of sentiment and emotion analysis, with one using an unsupervised method and the other using a supervised learning method. Though other books have been written about kitchen science, *On Food and Cooking* remains unmatched in the accuracy, clarity, and thoroughness of its explanations, and the intriguing way in which it blends science with the historical evolution of foods and cooking techniques. Among the major themes addressed throughout the new edition are:

- Traditional and modern methods of food production and their influences on food quality

- Our evolving knowledge of the health benefits and risks of foods

On Food and Cooking is an invaluable and monumental compendium of basic information about ingredients, cooking methods, and the pleasures of eating. It will delight and fascinate anyone who has ever cooked, savored, or wondered about food.

Carl Strehlow's comparative dictionary manuscript is a unique item of Australian cultural heritage; it is a large collection of circa 7,600 Aranda, 6,800 Luritja (Luritja) and 1,200 Dieri to German entries compiled at the beginning of the twentieth century at the Hermannsburg Mission in central Australia. It is an integral part of Strehlow's ethnographic work on Aboriginal cultures that his German editor Baron Moritz von Leonhardi published as *Die Aranda- und Luritja-Stämme in Zentral-Australien* (Strehlow 1907–1920) in Frankfurt. Strehlow and his editor had planned to publish a language study that included this comparative dictionary, but it remained unpublished until now due to a number of complicated historical and personal circumstances of the main characters involved with the dictionary. Strehlow's linguistic work is historically and anthropologically significant because it probably represents the largest and most comprehensive wordlist of Indigenous languages compiled in Australia during the early stages of contact. It is an important primary source for Luritja and Aranda speakers. Both languages are spoken in homes and taught in schools in central Australia. The reasons for presenting this work as a heritage dictionary—that is, as an exact transcription of the original form of the handwritten manuscript—are to follow the Western Aranda people's wishes and to maintain its historical authenticity, which will prove to be of great use to both Indigenous people and scholars interested in language.
