The story of Jeremiah Thurston who would stop at nothing to ensure that his daughter would be heir to the biggest mining company in California.

Revised and expanded in this third edition, *American Legal History* now features a new coauthor, James Ely, who is a specialist in the history of property rights. This highly acclaimed text provides a comprehensive selection of the most important documents in the field, which integrates the history of public and private law from America's colonial origins to the present. Devoting special attention to the interaction of social and legal change, it shows how legal ideas developed in tandem with specific historical events and reveals a rich legal culture unique to America. The book also deals with state and federal courts and looks at the relationship between the development of American society, politics, and economy, and how it relates to the evolution of American law. Introductions and instructive headnotes accompany each document, tying legal developments to broader historical themes and providing a social and political context essential to an understanding of the history of law in America. *American Legal History, Third Edition*, offers fresh material throughout and increased coverage of cases on such topics as slave law, politics, and terrorism. The authors have incorporated more cases dealing with minority rights, including Native American and Asian American rights, women's rights, and gender and gay rights. Two new chapters have been added to this edition: one on law and economics in modern America, including a discussion of the new federalism, and the other on law, politics, and terrorism, including a full discussion

of the USA PATRIOT Act. The since 1945 portion includes up-to-date material and current cases. The section on English background and colonial America has been expanded. In addition, there is new material on the most recent developments in American constitutional and legal history. Setting the legal challenges of the twenty-first century in a broad context, *American Legal History, Third Edition*, is an essential text for students and teachers of constitutional and legal history, the judicial process, and the effects of society on law.

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same

way, our skyscrapers one day standing derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's *Collapse* also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times

We live in a world that is known, every corner thoroughly explored. But has this knowledge cost us the ability to wonder? Wonder, Caspar Henderson argues, is at its most supremely valuable in just such a world because it reaffirms our humanity and gives us hope for the future. That's the power of wonder, and that's what we should aim to cultivate in our lives. But what are the wonders of the modern world? Henderson's brilliant exploration borrows from the form of one of the oldest and most widely known sources of wonder: maps. Large, detailed mappae mundi invited people in medieval Europe to vividly imagine places and possibilities they had never seen before: manticores with the head of a man, the body of a lion, and the stinging tail of a scorpion; tribes of one-eyed

men who fought griffins for diamonds; and fearsome Scythian warriors who drank the blood of their enemies from their skulls. As outlandish as these maps and the stories that went with them sound to us today, Henderson argues that our views of the world today are sometimes no less incomplete or misleading. Scientists are only beginning to map the human brain, for example, revealing it as vastly more complex than any computer we can conceive. Our current understanding of physical reality is woefully incomplete. *A New Map of Wonders* explores these and other realms of the wonderful, in different times and cultures and in the present day, taking readers from Aboriginal Australian landscapes to sacred sites in Great Britain, all the while keeping sight questions such as the cognitive basis of wonder and the relationship between wonder and science. Beautifully illustrated and written with wit and moral complexity, this sequel to *The Book of Barely Imagined Beings* is a fascinating account of the power of wonder and an unforgettable meditation on its importance to our future.

"The Jesuit review of faith and culture," Nov. 13, 2017-

"Fascinating.... Lays a foundation for understanding human history."—Bill Gates In this "artful, informative, and delightful" (William H. McNeill, New York Review of Books) book, Jared Diamond convincingly argues that geographical and environmental factors shaped the modern world. Societies that had had a head start in food production advanced beyond the hunter-gatherer stage, and then developed religion --as well as nasty germs and potent weapons of war --and adventured on sea and land to conquer and decimate preliterate cultures. A major advance in our understanding of human societies, Guns, Germs, and Steel chronicles the way that the modern world came to be and stunningly dismantles racially based theories of human history. Winner of the Pulitzer Prize, the Phi Beta Kappa Award in Science, the Rhone-Poulenc Prize, and the Commonwealth club of California's Gold Medal.
