“An Earth-man’s journey to the planet Mars, where he is treated to a wondrous vision of a communist future, complete with flying cars and 3D color movies.” —*Wonders & Marvels* A communist society on Mars, the Russian revolution, and class struggle on two planets is the subject of this arresting science fiction novel by Alexander Bogdanov (1873–1928), one of the early organizers and prophets of the Russian Bolshevik party. The red star is Mars, but it is also the dream set to paper of the society that could emerge on earth after the dual victory of the socialist and scientific-technical revolutions. While portraying a harmonious and rational socialist society, Bogdanov sketches out the problems that will face industrialized nations, whether socialist or capitalist. “[A] surprisingly moving story.” —*The New Yorker* “The contemporary reader will marvel at [Bogdanov’s] foresight: nuclear fusion and propulsion, atomic weaponry and fallout, computers, blood transfusions, and (almost) unisexuality.” —*Choice* “Bogdanov’s novels reveal a great deal about their fascinating author, about his time and, ironically, ours, and about the genre of utopia as well as his contribution to it.” —*Slavic Review*

This book is Childress' thorough examination of the early hollow earth stories of Richard Shaver, and the fascination that fringe fantasy subjects such as lost continents, UFOs, and the hollow earth have had on people. Shaver's rare 1948 book, I Remember Lemuria is reprinted in its entirety, and the book is packed with illustrations from Ray Palmer's Amazing Stories issues of the 1940s. Childress discusses famous hollow earth books and delves deep into whatever reality may be behind the stories of tunnels underground.

In 1976, NASA sent four Viking spacecraft to Mars to photograph the planet, including a mile-long mesa that uncannily resembles a human face. In this wide-ranging and profound analysis of the Mars data, Hoagland takes readers step by step through these NASA images and the evidence that a highly advanced civilization may have lived and built upon Mars hundreds of thousands of years ago. 50 photographs; 10 line drawings; maps and charts.

- Details how exploratory probes sent to Mars in the 1970s triggered a plethora of anomalous events, particularly crop circles (glyphs), and how these events are messages from ET intelligence to help us send a human mission to Mars
- Reveals how the anomalous Cydonia region of Mars fits the Golden Ratio Spiral and looks at links between Martian formations and Earth's ancient sites
- Illustrated throughout with color photographs, maps, and diagrams

In this full-color study based on 25 years of

research, Mary Bennett explores the ancient and modern connections between Mars and Earth as well as how extraterrestrial intelligences are trying to assist us in constructing a viable spacecraft to take a human crew swiftly and safely to Mars. She details how exploratory probes sent to Mars in the 1970s triggered over three decades of anomalous yet scientifically validated events, including crop circles, or crop glyphs. She explains how these formations, along with related events, encode advanced engineering concepts that offer solutions to the fundamental problems presently hindering long-haul crewed spaceflight--whether to the Moon, Mars, or beyond. Looking at the red planet itself, the author reveals the scientifically verifiable evidence pointing to intelligent design on the surface of Mars, specifically in the Cydonia region, which fits the Golden Ratio Spiral. She looks at the covert links between the Martian formations and Earth's ancient sites, such as the Avebury landscape in England and the Giza Complex. She describes how agencies concerned with space travel have been quietly mirroring areas of Mars through construction projects here on Earth, revealing that many of the ET messages have already been partially decoded. Taking you from a complex on Mars to the Teotihuacán pyramids in Mexico, from phi ratios to the Pentagon, from the Great Pyramid to quantum computing, this exploration of the hidden influence of Mars shows that our abilities as a future space-faring species began in the ancient past and are now coming to fruition.

sections on how to use World Book, other research aids, pronunciation key, a student guide to better writing, speaking, and research skills, and comprehensive index"-- The age of Augustus, commonly dated to 30 BC – AD 14, was a pivotal period in world history. A time of tremendous change in Rome, Italy, and throughout the Mediterranean world, many developments were underway when Augustus took charge and a recurring theme is the role that he played in shaping their direction. The Cambridge Companion to the Age of Augustus captures the dynamics and richness of this era by examining important aspects of political and social history, religion, literature, and art and architecture. The sixteen essays, written by distinguished specialists from the United States and Europe, explore the multi-faceted character of the period and the interconnections between social, religious, political, literary, and artistic developments. Introducing the reader to many of the central issues of the Age of Augustus, the essays also break new ground and will stimulate further research and discussion.

As America's largest city and best known immigration gateway into the country, the Big Apple represents the beauty, diversity and sheer strength of the United States, a global financial center that has enticed people chasing the "American Dream" for centuries. New York City has countless landmarks and tourist spots, but few are as old

or as associated with the city as the Brooklyn Bridge, the giant suspension bridge that spans nearly 1,600 feet as it connects lower Manhattan to Brooklyn. Indeed, the bridge is so old that Manhattan and Brooklyn represented the largest and third largest cities in America at the time of its construction, and the East River posed a formidable enough challenge that taking a ferry across could be dangerous. Among America's countless monuments and landmarks, none embody the principles of the nation quite like Lady Liberty, the colossal statue that stands on Liberty Island in New York Harbor. A gift from the French that was built and transported in the late 19th century, the Statue of Liberty has been a symbol of the United States' guaranty of individual freedom, and its location took on added meaning as it welcomed millions of immigrants sailing across the Atlantic to nearby Ellis Island. When Central Park was designed, it was an ambitious project on an almost unprecedented affair. As serene as Central Park is today, it's hard to imagine that its creation was an entirely manmade affair consisting of dynamite blasts, tons of imported topsoil, and the labor of thousands of workers. Before the area's transformation, the land was swampy terrain used by impoverished squatters and people who let their livestock roam the grounds, but after nearly 15 years of work, the metamorphosis was nearly complete. Like Manhattan itself, Grand Central Station, which recently celebrated its 100th birthday, manages to be both historic and modern. Built upon the site of a former railroad depot, the current structure and layout was phased in over the course of nearly a decade in the early 20th century. Whereas the

first railroad stations depressed the value of land nearby in the 19th century, the location of Grand Central was a boon that actually helped bring about construction all across Midtown, including the nearby Chrysler Building, thereby serving to transform the cityscape altogether. It's no surprise that New Yorkers have always wanted to construct the biggest and best structures possible, even in the early 1930s at the height of the Great Depression. Indeed, those years produced the Empire State Building, which remains the city's most iconic building, but New York's most famous skyscraper wouldn't have been possible without the Chrysler Building, a landmark in its own right that was the tallest building in the world for nearly a year before its more famous counterpart's completion. In fact, the spirit of competition between the groups working on the two buildings helped ensure that both look like they do today, and the Chrysler Building only reached the height it did because a large skyscraper at 40 Wall Street was also trying to claim the mantle of tallest building at the same time. The Most Famous Landmarks of New York City chronicles the story of how the Big Apple's greatest landmarks came to be. Along with pictures of important people, places, and events, you will learn about New York City's most famous landmarks like never before. Originally created in 1971 by NASA contractor Grumman, the Apollo Spacecraft News Reference (LEM) was intended to educate members of the media, government, and private sector contractors about one of history's most ambitious undertakings. Excursion Module and crew extra-vehicular activity procedures and equipment. (A companion book that focuses on the CM is also available.) Scores of photos and diagrams accompany the easy-to-understand text. Chapters include: Introduction, Mission Description, Apollo Spacecraft, Lunar Module, Crew Personal Equipment, Environmental Control, Control and Displays, Guidance, Navigation, and Control, Main Propulsion, Reaction Control, Electrical Power, Communications, Instrumentation, Lighting, Portable Life Support System, Biographies, Grumman Aircraft Corp., Brief History of the LM, LM Manufacturing, Glossary, Contractors, The Moon (chapter written by Richard C. Hoagland), Index, and the LM Anatomy Booklet (reprinted in black and white). It also includes a fascinating chapter about "LM Derivatives," showing how variations of the LM could have been built and flown in support of a wide variety of missions. Although it may be one of the most complete studies of the systems and technology that made landing on the Moon possible, it's never been easy to find copies of this text because copies were never widely released -- until now. This reprint is of an edition featuring a mission similar to Apollo 15, 16 or 17, with astronauts performing three 7-hour EVAs using the Lunar Roving Vehicle. It features all the original text, diagrams and photos. It's a wonderful reference for the space flight fan, docent or engineering buff or for anyone else who ever wondered, "How'd they do that!"

An asteroid transformed Mars from a lush planet with rivers and oceans into a bleak and icy hell. Is Earth condemned to the same fate, or can we protect ourselves and our planet from extinction? In his most riveting and revealing book yet, Graham Hancock examines the evidence that the barren Red Planet was once home to a lush environment of flowing rivers, lakes, and oceans. Could Mars have sustained life and civilization? Megaliths found on the

parched shores of Cydonia, a former Martian ocean, mirror the geometrical conventions of the pyramids at Egypt's Giza necropolis. Especially startling is a Sphinx-like structure depicting a face with distinguishable diadem, teeth, mouth and an Egyptian-style headdress. Might there be a connection between the structures of Egypt and those of Mars? Why does NASA continue to dismiss these remarkable anomalies as "a trick of light"? Hancock points to the intriguing possibility that ancient Martian civilization is communicating with us through the remarkable structures it left behind. In exploring the possible traces left by the Martian civilization and the cosmic cataclysm that may have ended it, *The Mars Mystery* is both an illumination of our ancient past and a warning--that we still have time to heed--about our ultimate fate.

Amazing discoveries about ancient knowledge bring a fresh view of human history and our place in the universe. Thousands of years ago, the Druids already measured the exact dimensions and rotations of our Earth, Sun and Moon, and how they rotate. Stonehenge and the Pyramids are based on a precise, prehistoric, 366-degree time and space geometry. This first-person account of a legendary necropolis will delight Francophiles, tourists and armchair travelers, while enriching the experience of taphophiles (cemetery lovers) and aficionados of art and architecture, mystery and romance. Carolyn Campbell's evocative images are complemented by those of renowned landscape photographer Joe Cornish. "City of Immortals" celebrates the novelty and eccentricity of Père-Lachaise Cemetery through the engrossing story of the history of the site established by Napoleonic decree along with portraits of the last moments of the cultural icons buried within its walls. In addition to several "conversations" with some of the high-profile residents, three guided tours are provided along with an illustrated pull-out map featuring the grave sites of eighty-four architects, artists,

In the century following 150 BCE, the Romans developed a coherent vision of empire and a more systematic provincial administration. The city of Rome itself became a cultural and intellectual center that eclipsed other Mediterranean cities, while ideas and practices of citizenship underwent radical change. In this book, Josiah Osgood offers a new survey of this most vivid period of Roman history, the Late Republic. While many discussions focus on politics in the city of Rome itself, his account examines developments throughout the Mediterranean and ties political events more firmly to the growth of overseas empire. The volume includes a broad overview of economic and cultural developments. By extending the story well beyond the conventional stopping date of Julius Caesar's assassination in 44 BCE, Osgood ultimately moves away from the old paradigm of the fall of the Republic. The Romans of the Late Republic emerge less as the disreputable gangsters of popular imagination and more as inspired innovators.

Cities today are paradoxical. They are engines of innovation and opportunity, but they are also plagued by significant income inequality and segregation by ethnicity, race, and class. These inequalities and segregations are often reinforced by the urban built environment: the planning of space and the design of architecture. This condition threatens attainment of wider social and economic prosperity. In this innovative new study, Dean Saitta explores questions of urban sustainability by taking an intercultural, trans-historical approach to city planning. Saitta uses a

largely untapped body of knowledge—the archaeology of cities in the ancient world—to generate ideas about how public space, housing, and civic architecture might be better designed to promote inclusion and community, while also making our cities more environmentally sustainable. By integrating this knowledge with knowledge generated by evolutionary studies and urban ethnography (including a detailed look at Denver, Colorado, one of America’s most desirable and fastest growing ‘destination cities’ but one that is also experiencing significant spatial segregation and gentrification), Saitta’s book offers an invaluable new perspective for urban studies scholars and urban planning professionals.”

Set against the construction of the Eiffel Tower, this novel charts the relationship between a young Scottish widow and a French engineer who, despite constraints of class and wealth, fall in love. In February 1887, Caitriona Wallace and Émile Nougier meet in a hot air balloon, floating high above Paris, France--a moment of pure possibility. But back on firm ground, their vastly different social strata become clear. Cait is a widow who because of her precarious financial situation is forced to chaperone two wealthy Scottish charges. Émile is expected to take on the bourgeois stability of his family's business and choose a suitable wife. As the Eiffel Tower rises, a marvel of steel and air and light, the subject of extreme controversy and a symbol of the future, Cait and Émile must decide what their love is worth. Seamlessly weaving historical detail and vivid invention, Beatrice Colin evokes the revolutionary time in which Cait and Émile live--one of corsets and secret trysts, duels and Bohemian independence, strict tradition and Impressionist experimentation. *To Capture What We Cannot Keep*, stylish, provocative, and shimmering, raises probing questions about a woman's place in that world, the overarching reach of class distinctions, and the sacrifices love requires of us all.

Thirty years after its publication, *The Death and Life of Great American Cities* was described by *The New York Times* as "perhaps the most influential single work in the history of town planning....[It] can also be seen in a much larger context. It is first of all a work of literature; the descriptions of street life as a kind of ballet and the biting satiric account of traditional planning theory can still be read for pleasure even by those who long ago absorbed and appropriated the book's arguments." Jane Jacobs, an editor and writer on architecture in New York City in the early sixties, argued that urban diversity and vitality were being destroyed by powerful architects and city planners. Rigorous, sane, and delightfully epigrammatic, Jacobs's small masterpiece is a blueprint for the humanistic management of cities. It is sensible, knowledgeable, readable, indispensable. The author has written a new foreword for this Modern Library edition.

The *New York Times* bestseller about the strange history of NASA and its cover-ups regarding its origins and extraterrestrial architecture found on the moon and Mars is even more interesting in its new edition. Authors Richard C. Hoagland and Mike Bara include a new chapter about the discoveries made by ex-Nazi scientist and NASA stalwart Wernher von Braun regarding what he termed "alternate gravitational solutions," or the rewriting of Newtonian physics into hyperdimensional spheres. When a meteorite lands in Surrey, the locals don't know what to make of it. But as Martians emerge and begin killing bystanders, it quickly becomes clear—England is under attack. Armed soldiers converge on the scene to ward off the invaders, but meanwhile, more Martian cylinders land on Earth, bringing reinforcements. As war

breaks out across England, the locals must fight for their lives, but life on Earth will never be the same. This is an unabridged version of one of the first fictional accounts of extraterrestrial invasion. H. G. Wells's military science fiction novel was first published in book form in 1898, and is considered a classic of English literature.

Space expert Mike Bara looks at the secret space program of the American military that has been going on for over 60 years. Bara looks the Army Ballistic Missile Agency's proposed Project Horizon which was a study to determine the feasibility of constructing a scientific / military base on the Moon. On June 8, 1959, a group at the Army Ballistic Missile Agency (ABMA) produced for the U.S. Department of the Army a report entitled Project Horizon, A U.S. Army Study for the Establishment of a Lunar Military Outpost. The permanent outpost was predicted to cost \$6 billion and was to become operational in December 1966 with twelve soldiers stationed at the Moon base. Wernher von Braun, head of ABMA, appointed Heinz-Hermann Koelle to head the project team at Redstone Arsenal. Their plans called for 147 early Saturn A-class rocket launches to loft spacecraft components for assembly in low Earth orbit at a spent-tank space station. A lunar landing-and-return vehicle would have shuttled up to 16 astronauts at a time to the base and back. While officially Project Horizon was scrapped by the military, or was it? Bara looks into the secret space program, the possibility of secret bases on the Moon and many rumors surrounding the military's secret projects in space. The book will ask and answer many questions. Was Wernher von Braun involved in the

Roswell crash investigation? Why did he suddenly become fascinated with highly advanced theoretical physics propulsion systems during the Apollo years, and why did all of this public research suddenly "go black" in the early 1960s? Did NASA and the Pentagon know and expect to find evidence of alien bases on the Moon? Did the Apollo 12 astronauts deliberately damage the TV cameras in order to hide their explorations of one of these bases? What was the top secret "Chapel Bell" experiment on Apollo 16? Has teleportation been developed from captured alien technology and used to transport humans to secret NASA/DOD bases on Mars? Do space shuttle videos taken in the 1990s show proof of a highly advanced secret US space fleet? Does hacker Gary Mackinnon's discovery of defense department documents identifying "non-terrestrial officers" serving in space mean that the US has secret space platforms designed to fight a war with an alien race? And, have these secret military space platforms been photographed by civilian observers here on Earth?

Despite the long-held notion that the early Christians were meek and mild, going to their martyr's deaths singing hymns of love and praise, the truth, as Catherine Nixey reveals, is very different. Far from being meek and mild, they were violent, ruthless and fundamentally intolerant. Unlike the polytheistic world, in which the addition of one new religion made no fundamental difference to the old ones, this new ideology stated not only that it was the way, the truth and the light but that, by extension, every single other way was wrong and had to be destroyed. From the 1st century to the 6th, those who didn't fall into step with its beliefs were pursued in every possible way: social, legal, financial and physical. Their altars were upturned and their temples demolished, their statues hacked to pieces and their priests killed. It was an annihilation. Authoritative, vividly written and utterly compelling, this is a remarkable debut from a brilliant young historian.

Examines the evidence in photographs of the surface of Mars for the existence of a lost city on the planet.

The Hippodrome of Constantinople was constructed in the fourth century AD, by the Roman Emperor Constantine I, in his new capital. Throughout Byzantine history the Hippodrome served as a ceremonial, sportive and recreational center of the city; in the early period, it was used mainly as an arena for very popular, competitive, and occasionally violent chariot races, while the Middle Ages witnessed the imperial ceremonies coming to the fore gradually, although the races continued. The ceremonial and recreational role of the Hippodrome somehow continued during the Ottoman period. Being the oldest structure in the city, the Hippodrome has witnessed exciting chariot races, ceremonies glorifying victorious emperors as well as the charioteers, and the riots that shook the

There is ample evidence across our solar system of cataclysmic and catastrophic destruction events. The asteroid belt, for example, may be the remains of an exploded planet! The known planets are scarred from incredible impacts, and teeter in their orbits due to causes heretofore inadequately explained. Rejecting the naturalist and materialist assumptions of catastrophism forwarded by other researchers, Farrell asserts that it is time to take the ancient myths of a Cosmic War in the heavens seriously. Incorporating extraterrestrial artifacts, cutting-edge ideas in contemporary physics, and the texts of ancient myths into his argument, Farrell maintains that an ancient interplanetary war was fought in our own solar system with weapons of extraordinary power and sophistication. In doing so, he offers a solution to an enigma that has long mystified researchers, disclosing a cause of that ancient war, the means by which it was waged, and the real nature of the secret technology behind the ancient "Tablets of Destinies." It is all here, folks! The history of the Exploded Planet hypothesis, and what mechanism can actually explode a planet. jungle. Since the days of conquistador Hernán Cortés, rumors have circulated about a lost city of immense wealth hidden somewhere in the Honduran interior, called the White City or the Lost City of the Monkey God. Indigenous tribes speak of ancestors who fled there to escape the Spanish invaders, and they warn that anyone who enters this sacred city will fall ill and die. In 1940, swashbuckling journalist Theodore Morde returned from the rainforest with hundreds of artifacts and an electrifying story of having found the Lost City of the Monkey God-but then committed suicide without revealing its location. Three quarters of a century later, bestselling author Doug Preston joined a team of scientists on a groundbreaking new quest. In 2012 he climbed aboard a rickety, single-engine plane carrying the machine that would change everything: lidar, a highly advanced, classified technology that could map the terrain under the densest rainforest canopy. In an unexplored valley ringed by steep mountains, that flight revealed the unmistakable image of a sprawling metropolis, tantalizing evidence of not just an undiscovered city but an enigmatic, lost civilization. Venturing into this raw, treacherous, but breathtakingly beautiful wilderness to confirm the discovery, Preston and the team battled torrential rains, quickmud, disease-carrying insects, jaguars, and deadly snakes. But it wasn't until they returned that tragedy struck: Preston and others found they had contracted in the ruins a horrifying, sometimes lethal-and incurable-disease. Suspenseful and shocking, filled with colorful history, hair-raising adventure, and dramatic twists of fortune, **THE LOST CITY OF THE MONKEY GOD** is the absolutely true, eyewitness account of one of the great discoveries of the twenty-first century.

imperial palaces and Pantheon are among its most famous features, this volume explores Rome primarily as a city in which many thousands of men and women were born, lived and died. The thirty-one chapters by leading historians, classicists and archaeologists discuss issues ranging from the monuments and the games to the food and water supply, from policing and riots to domestic housing, from death and disease to pagan cults and the impact of Christianity. Richly illustrated, the volume introduces groundbreaking new research against the background of current debates and is designed as a readable survey accessible in particular to undergraduates and non-specialists.

But street addresses were not invented to help you find your way; they were created to find you. In many parts of the world, your address can reveal your race and class. In this wide-ranging and remarkable book, Deirdre Mask looks at the fate of streets named after Martin Luther King Jr., the wayfinding means of ancient Romans, and how Nazis haunt the streets of modern Germany. The flipside of having an address is not having one, and we also see what that means for millions of people today, including those who live in the slums of Kolkata and on the streets of London. It is astonishing to think that many great archaeological discoveries occurred in Egypt only by way of accident during the 19th and 20th centuries. Even today accidents still play a vital, frequent and sometimes comical role, with new discoveries happening almost weekly and with many more secrets of the ancient Egyptian civilization still remaining. This book takes readers beyond these discoveries and their associated accidents. This book cannot be considered purely as an Egyptological and archaeological reading or even as dry history pages covering Egypt's modern era of the 19th and 20th centuries. Rather, it is a book that sheds light on the intimate links between the birth of Egyptology after the deciphering of the famous Rosetta Stone and the raging world politics and regional power shifts in Egypt and its surroundings. The book ties together the political storms of colonialism in the first half of the 19th century and the unsettling effect these upheavals had on Egypt during the reign of Mohamed Ali Pasha. In a storytelling style, the book is a journey through time and place. The book takes readers on a guided tour to most of Egypt's well-known monuments that were mainly discovered by simple accident or in which an accident played a major part leading to discovery. In addition, the book leads readers through time exploring ancient Egypt, the days of the pharaohs, ancient gods, rituals and public ceremonial festivals, with old and new stories that shed light on the true value of such discoveries in antiquity and modern day.

Rochester may be better known for its rolling hills and lilac fields than for its architecture, but

look closely and the city's hidden gems reveal themselves. In this survey of Rochester's historic architectural elements and styles, city planner Michael Behrendt encourages you to "slow down, look round...check out the fancy cornices on North Main Street and admire the brickwork on the few remaining mill structures." Impress your neighbors by pointing out the Italianate, Queen Anne, Georgian or Federal styles of their houses and identifying the mansard roofs, oriel windows and porticos around town. Drawing from his series of articles written for the Rochester Times, Behrendt examines everything from barns, churches and schoolhouses to the prominent Rochester Opera House. Discover Rochester's history as written in brick and stone, marble and mortar.
