Evidence-Based Practice for Nurses: Appraisal and Application of Research, Fourth Edition is the definitive reference for transitioning research into nursing practice. The text is based on the innovation-decision process (IDP), and is shaped according to the five steps of the IDP: knowledge, persuasion, decision, implementation, and confirmation.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Social and behavioral science has for decades studied and recognized leadership as a social exchange between leaders and followers. But leadership is rather complex, and as such, it tends to lead to an increased interest within and across different disciplines. This book is an attempt to provide theoretical and empirical framework to better understand leadership challenges in various contexts. The authors cover an array of themes that span from an individual level to an organizational and societal level. In this volume, two sections are presented. The first section based on individual level focuses on different leadership styles and abilities, and the other section provides theories to understand leadership in public administration, in industrial settings and in nonprofit organizations.

Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. Nurses make up the largest segment of the health care profession, with 3 million registered nurses in the United States. Nurses work in a wide variety of settings, including hospitals, public health centers, schools, and homes, and provide a continuum of services, including direct patient care, health promotion, patient education, and coordination of care. They serve in leadership roles, are researchers, and work to improve health care policy. As the health care system undergoes transformation due in part to the Affordable Care Act (ACA), the nursing profession is making a wide-reaching impact by providing and affecting quality, patient-centered, accessible, and affordable care. In 2010, the Institute of Medicine (IOM) released the report *The Future of Nursing: Leading Change, Advancing Health*, which made a series of recommendations pertaining to roles for nurses in the new health care landscape. This current report assesses progress made by the Robert Wood Johnson Foundation/AARP Future of Nursing: Campaign for Action and others in implementing the recommendations from the 2010 report and identifies areas that should be emphasized over the next 5 years to make further progress toward these goals.

As the first attempt to synthesize the movement toward widespread implementation of evidence-based mental health practices, this groundbreaking collection articulates the basic tenets of evidence-based medicine and shows how practices proven effective by clinical services research could improve the lives of many people. Intended to stimulate much-needed public discussion, these remarkable contributions cover both general issues, such as Implementing practices in routine mental health settings, including strategies for disseminating evidence-based practices to staff members Ensuring that efforts to implement such practices are informed by the knowledge and experience of administrators, clinicians, patients, and advocates Integrating evidence-based practices with the recovery model and focusing on guidelines and algorithms for pharmacologic treatment of people with severe mental illness Identifying the policy implications of the movement, particularly in public-sector settings, and describing eight courses of action for addressing the gap between science and practice and specific practices, such as Describing critical components of practices for which substantial evidence exists, such as supported employment, dual diagnosis services, and assertive community treatment Developing an evidence base for particular populations, such as children and adolescents and geriatric patients; and for clinical subgroups, such as patients with severe mental illness and posttraumatic stress disorder-and implementing a range of practices for each population Debate in public forums is critical to explaining the benefits of evidence-based care and allaying the fears of patients, practitioners, administrators, policy makers, and vested interest groups that evidence-based care excludes them from the decision-making process. Patients need to know that their individual characteristics, preferences, and autonomy are highly valued and won't be discounted by rigid adherence to the particular treatments. Practitioners need to know about the credibility of the evidence base and about new techniques and responsibilities and to understand that their favorite practices won't necessarily be excluded during initial attempts to implement evidence-based practices. Administrators and policy makers need to know about financing, organizing, implementing, and sustaining new practices. Finally, vested interest groups need to know that the introduction of evidence-based practices doesn't mean that what they do now is ineffective. This unique and densely informative volume will be welcomed by mental health care professionals and by lawmakers, planners, administrators, and others who are charged with the responsibility of providing effective care to vulnerable populations.
