Nikola Tesla Imagination and the Man That Invented the 20th Century Oculus Publishers

With more than 7,000 up-to-date phrases, this dictionary covers situations from talking to a doctor to ordering a meal, and helps learners communicate personal feelings, and make small talk.

Student Unit Guides are perfect for revision. Each guide is written by an examiner and explains the unit requirements, summarises the relevant unit content and includes a series of specimen questions and answers. There are three sections to each guide: Introduction - includes advice on how to use the guide, an explanation of the skills being tested by the assessment objectives, an outline of the unit or module and, depending on the unit, suggestions for how to revise effectively and prepare for the examination questions. Content Guidance - provides an examiner's overview of the module's key terms and concepts and identifies opportunities to exhibit the skills required by the unit. It is designed to help students to structure their revision and make them aware of the concepts they need to understand the exam and how they might analyse and evaluate topics. Question and Answers - sample questions and with graded answers which have been carefully written to reflect the style of the unit. All responses are accompanied by commentaries which highlight their respective strengths and weaknesses, giving students an insight into the mind of the examiner.

NMR Spectroscopy Explained : Simplified Theory, Applications and Examples for Organic Chemistry and Structural Biology provides a fresh, practical guide to NMR for both students and practitioners, in a clearly written and non-mathematical format. It gives the reader an intermediate level theoretical basis for understanding laboratory applications, developing concepts gradually within the context of examples and useful experiments. Introduces students to modern NMR as applied to analysis of organic compounds. Presents material in a clear, conversational style that is appealing to students. Contains comprehensive coverage of how NMR experiments actually work. Combines basic ideas with practical implementation of the spectrometer. Provides an intermediate level theoretical basis for understanding laboratory experiments. Develops concepts gradually within the context of examples and useful experiments. Introduces the product operator formalism after introducing the simpler (but limited) vector model.

'I'm no angel.' Bernie Ecclestone Born into poverty, Bernie Ecclestone has made himself a billionaire by developing the world's second most popular sport - Formula One racing. Private, mysterious and some say sinister, the eighty-year-old criss-crosses the globe in his private jet, mixing with celebrities, statesmen and sporting heroes. His success is not just in creating a multibillion-pound global business but in resisting repeated attempts to snatch the glittering prize from his control. Ecclestone has never before revealed how he graduated from selling second-hand cars in London's notorious Warren Street to become the major player he is today. He has finally decided to reveal his secrets: the deals, the marriages, the disasters and the successes in Formula One racing, in Downing Street, in casinos, on yachts and in the air. Surprisingly, he has granted access to his inner circle to Tom Bower, described by Ecclestone as 'The Undertaker' - the man who buries reputations - and has given him access to all his friends and enemies. All have been told by Ecclestone, 'Tell him the truth, good or bad.' No Angel is a classic rags-to-riches story, the unique portrayal of a unique man and an intriguing insight into Formula One racing, business and the human spirit. Tom Bower is the author of nineteen books, including biographies of Robert Maxwell, Mohamed Fayed, Gordon Brown, Richard Branson, Conrad Black and more recently, Simon Cowell.

Student Unit Guides are perfect for revision. If you want to learn about one of history's most fascinating minds and uncover some of his secrets of imagination—secrets that enabled him to invent machines light years ahead of his time and literally bring light to the world—then you want to read this book. Imagination amplifies and colors every other element of genius, and unlocks our potential for understanding and ability. It's no coincidence that geniuses not only dare to dream of the impossible for their work, but do the same for their lives. They're audacious enough to think that they're not just ordinary players. Few stories better illustrate this better than the life of the father of the modern world, a man of legendary imaginative power and wonder: Nikola Tesla. In this book, you'll be taken on a whirlwind journey through Tesla's life and work, and not only learn about the successes and mistakes of one of history's greatest inventors, but also how to look at the world in a different, more imaginative way. Read this book now and learn lessons from Nikola Tesla on why imagination is so vital to awakening your inner genius, and insights into the real "secret" to creativity, as explained by people like Jobs, Picasso, Dali, and Twain.

Many problems in theoretical economics are mathematically formalized as dynamical systems of difference and differential equations. In recent years a truly open approach to studying the dynamical behavior of these models has begun to make its way into the mainstream. That is, economists formulate their hypotheses and study the dynamics of the resulting models rather than formulating the dynamics and studying hypotheses that could lead to models with such dynamics. This is a great progress over using linear models, or using nonlinear models with a linear approach, or even squeezing economic models into well-studied nonlinear systems from other fields. There are today a number of economic journals open to publishing this type of work and some of these have become important. There are several societies which have annual meetings on the subject and participation at these has been growing at a good rate. And of course there are methods and techniques available to a more general audience, as well as a greater availability of software for numerical and graphical analysis that makes this type of research even more exciting. The lecturers for the Advanced School on Nonlinear Dynamical Systems in Economics, who represent a wide selection of the research areas to which the theory has been applied, agree on the importance of simulations and computer-based analysis. The School emphasized computer applications of models and methods, and all contributors ran computer lab sessions.

Award-winning author Sandy Silverthorne and John Warner's first collection of one-minute mysteries has sold more than 100,000 copies, and now the two offer more fun thinking puzzles for super-sleuths of all ages. It's an entertaining book for the whole family. Each one-page mystery is illustrated with a hilarious cartoon that presents an obvious (and obviously incorrect!) solution. Readers can turn to a page of clues, each one revealing more information until the a-ha! moment finally arrives. Sure to make folks scratch their heads and think outside the box, this is the perfect book to pass the time or pep up a party—good clean fun for anytime, anywhere, and anyone! Previously released as Return of the One-Minute Mysteries and Brain Teasers. Presents one hundred mysteries and brain teasers which readers can attempt to solve with the provided clues.

Nice Talking with You is a two-level oral communication series designed to get students talking. Nice Talking with You Level 2 is designed for elementary and pre-intermediate students. It contains 12 topic-based units and two review units. Topics in Level 2 relate to the equivalent units in Level 1, and include Going out, Fashion, Learning, Experience abroad, Health, and Careers. Practical conversation strategies are introduced in each unit and recycled in later units. Examples of strategies featured in Nice Talking with You Level 2 are: introducing a new idea; making, accepting and declining invitations; changing the focus of a topic; and making an inference.
