Many enquiries into the state of accounting education/training, undertaken in several countries over the past 40 years, have warned that it must change if it is to be made more relevant to students, to the accounting profession, and to stakeholders in the wider community. This book's over-riding aim is to provide a comprehensive and authoritative source of reference which defines the domain of accounting education/training, and which provides a critical overview of the state of this domain (including emerging and cutting edge issues) as a foundation for facilitating improved accounting education/training scholarship and research in order to enhance the educational base of accounting practice. The Routledge Companion to Accounting Education highlights the key drivers of change - whether in the field of practice on the one hand (e.g. increased regulation, globalisation, risk, and complexity), or from developments in the academy on the other (e.g. pressures to embed technology within the classroom, or to meet accreditation criteria) on the other. Thirty chapters, written by leading scholars from around the world, are grouped into seven themed sections which focus on different facets of their respective themes – including student, curriculum, pedagogic, and assessment considerations.

This publication is an edited volume of Albert and Roberta Wohlstetters' key writings relating to nuclear proliferation and national security affairs, with commentaries by the Wohlstetters' colleagues and students. It also serves as a testament to the continuing relevance of the work of Albert and Roberta Wohlstetter in the fields of nuclear and security policy analysis. Albert and Roberta wrote hundreds of articles and studies on U.S. policy on the Balkans, as well as the Persian Gulf; strategic command and control; intelligence and warning; NATO nuclear planning; U.S.-Russian arms control; strategic and theater missile defenses; the economics and military dangers of civilian nuclear energy; nuclear safeguards and nuclear nonproliferation; and military nuclear strategy and methods of policy analysis and design. Increased concern about the spread of nuclear weapons in the Far and Middle East, the controversy surrounding civilian nuclear cooperation with India, the global revival of nuclear power and debate over its economics and security implications, the controversies surrounding how the Nuclear Nonproliferation Treaty's obligations and rights are being cynically read by Iran and other states - all of these issues have prompted Washington pundits and national security analysts to cite the Wohlstetters' work. The same can also be said of the security concerns recently raised by Islamic fundamentalism, the

continued instability of the Balkans, the questions surrounding NATO's future and America's alliances in the Far East, the relevance of nuclear deterrence after the Cold War, and the emergence of ballistic missile defense as a key ingredient in strategic forces and alliance relations. This volume can hardly cover all the insights that the Wohlstetters' work might shed on these topics. Instead, it is designed to make some of the most significant of Albert and Roberta's writings many of which were previously unpublished much more accessible.

The book Towards Socially Integrative Cities deals with the transition towards urban sustainability through socially integrative cities in Europe and China. It shares the impactful original research results of an EU-funded R&I project involving eight European and six Chinese partners (TRANS-URBAN-EU-CHINA; see www.transurbaneuchina.eu). Three each of the six editors come from European and Chinese universities and research institutions. The first articles (No. 1–4) provide an overview and insights into the conceptual basis of the book. The socially integrative city is framed by discussions in academia and practice, and it is defined in a comprehensive way as an element of urban sustainability. Sustainability transitions in China are linked to international discussions and the challenges are articulated. Moreover, the discussions touch on the strengths and weaknesses related to managing urban growth and the rapid expansion of cities. Land development tools are discussed with regard to the opportunities they offer for creating socially integrative cities. A second set of articles (No. 5–9) focus on socially integrative urban regeneration of cities. After an overview of policies and strategies in Europe and China, detailed aspects are discussed, such as community building through public engagement, challenges of place-making, and the role of education and life-long learning. Finally, a manuscript on heritage preservation and its impact on social integration in urban regeneration concludes this section. A third set of articles (No. 10–13) look into issues of the

transformation of cities and sustainability transitions. Transformation is understood as a complex set of interactions. The development of tools, such as community platforms for information and dialogue transfer, are discussed as an instrument to facilitate transition processes. The transformative capacity of cities in Europe and China is discussed in an article that looks into possibilities to narrow the gaps between urban planning and development. Smart and eco-cities in Europe and China are taken as an empirical base. Advanced methods, such as the Social Cost–Benefit Analysis, may support social integration. Finally, an example of how the use of multiple data sources can speed up the digital transition in cities and provide decision support for social integration is presented. The final set of articles (No. 14 and 15) deal with questions of replicability of experiences and the role of concrete urban experiments in so-called Urban Living Laboratories. Methods to explore the replication potential of urban solutions for socially integrative cities are discussed. Finally, the potential of urban living laboratories for nurturing open urban innovation in Chinese cities is scrutinized. Several examples are discussed, and conclusions regarding the enhancement of social integration in cities are drawn. The book is edited by Bernhard Müller (Technische Universität Dresden, TUD), Baojun Yang (China Academy of Urban Planning and Design, CAUPD), Liu Jian (Tsinghua University), Jianming Cai (China Academy of Sciences, CAS), Paulina Schiappacasse (TUD) and Hans-Martin Neumann (Austrian Institute of Technology, AIT).

In this provocative book, one of our most eminent political scientists questions the extent to which the American Constitution furthers democratic goals. Robert Dahl reveals the Constitution's potentially antidemocratic elements and explains why they are there, compares the American constitutional system to other democratic systems, and explores how we might alter our political system to achieve greater equality among citizens. In a new chapter for this second edition, he shows how increasing differences in state populations revealed by the Census of 2000 have further increased the veto power over constitutional amendments held by a tiny minority of Americans. He then explores the prospects for changing some important political practices that are not prescribed by the written Constitution, though most Americans may assume them to be so.
