In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and

above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalindex.

The April 2012 Global Financial Stability Report assesses changes in risks to financial stability over the past six months, focusing on sovereign vulnerabilities, risks stemming from private sector deleveraging, and assessing the continued resilience of emerging markets. The report probes the implications of recent reforms in the financial system for market perception of safe assets, and investigates the growing public and private costs of increased longevity risk from aging populations.

Every family should have financial goals for the future. Being unprepared can lead to monetary chaos. *Financial Management of Your Future* deals with strategies for accomplishing financial goals. What investment returns are necessary to achieve explicit family goals? How are returns logically related to risks for investment opportunities that are considered? Can different families have different tolerances for experiencing investment risk? Why is asset allocation the key investment decision for most families? What are the characteristics and valuations of bonds, stocks, mutual funds, real estate and international securities that a family might consider? How should a family construct, monitor, and revise a portfolio of investments over time? How should careful estate planning be done by a family in order to delay or avoid taxes in passing on property to their children, grandchildren, and favorite charities? And how can some of the concepts and techniques from "modern portfolio theory" be helpful to a family as it attempts to answer these questions? This book deals with financial strategies for three adult age categories: (1) Families of ages twenty to forty in the earlier years of active employment, child raising, and the beginning of saving for retirement; (2) Families of ages forty to sixty in their years of maximum income, high educational expenses for their children, and more serious thinking about forthcoming retirement; and (3) Families of ages sixty to eighty having retired or approaching full retirement.
