These are just some of the questions you will find answered in this delightful collection of stories recounting real-life incidents from the life of Sudha Murty-teacher, social worker and bestselling writer. There is the engaging story about one of her students who frequently played truant from school. The account of how her mother's advice to save money came in handy when she wanted to help her husband start a software company, and the heart-warming tale of the promise she made-and fulfilled to her grandfather, to ensure that her little village library would always be well supplied with books. the more invested in preparing their students for state and national assessments. In *Tests That Teach: Using Standardized Tests to Improve Instruction*, Karen Tankersley guides you with proven tips and instructional strategies to help your students perform to their potential. Covering all core contents areas—language arts, social studies, math, and science—and respecting all levels of student performance, Tankersley

- \*Examines the various types of questions that routinely appear on these assessments;
- \*Provides sample multiple-choice and constructed-response questions from the tests;
- \*Offers guidelines on how to create daily lessons that encourage students to practice the skills and demonstrate the knowledge they'll need to use on the high-stakes tests;
- \*Suggests word lists, games, discussion topics, and testing ideas for your classroom; and
- \*Describes how school staff can create a learning community that fosters collaboration among teachers and high performance in students.

Also included are a wealth of online resources for lesson plans, daily classroom activities, and virtual field trips, as well as links to every state's released materials on its own assessment. As Tankersley explains, teaching students the skills they need to do well on constructed-response tests will better prepare students both to score well on state and national assessments and to take their place as thoughtful and organized thinkers in a rapidly changing, competitive society.

A leading psychologist explains why nearly all of us—including many of those who are persecuted and powerless—so often defend the social systems that cause misery and injustice. Why do we so often defend the very social systems that are responsible for injustice and exploitation? In *A Theory of System Justification*, John Jost argues that we are motivated to defend the status

quo because doing so serves fundamental psychological needs for certainty, security, and social acceptance. We want to feel good not only about ourselves and the groups to which we belong, but also about the overarching social structure in which we live, even when it hurts others and ourselves. Jost lays out the wide range of evidence for his groundbreaking theory and examines its implications for our communities and our democracy. Drawing on twenty-five years of research, he provides an accessible account of system justification theory and its insights. System justification helps to explain deep contradictions, including the feeling among some women that they don't deserve the same salaries as men and the tendency of some poor people to vote for policies that increase economic inequality. The theory illuminates the most pressing social and political issues of our time—why has it been so hard to combat anthropogenic climate change?—as well as some of the most intimate—why do some black children prefer white dolls to black ones and why do some people stay in bad relationships? Jost's theory has far-reaching implications, and he offers numerous insights that political activists and social justice advocates can use to promote change.

This report presents the conceptual foundations of the OECD Programme for International Student Assessment (PISA), now in its seventh cycle of comprehensive and rigorous international surveys of student knowledge, skills and well-being. Like previous cycles, the 2018 assessment covered reading, mathematics and science, with the major focus this cycle on reading literacy, plus

an evaluation of students' global competence – their ability to understand and appreciate the perspectives and world views of others. Financial literacy was also offered as an optional assessment.

“What is important for citizens to know and be able to do?” The OECD Programme for International Student Assessment (PISA) seeks to answer that question through the most comprehensive and rigorous international assessment of student knowledge and skills. As more countries join its ranks, PISA ...

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs

and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
