This book develops a debate around responsible social inquiry into new racism. A variety of ways of researching new forms of racism (for example, aversive, modern, cultural, purportedly color-blind, and new racism) are addressed. Experiments that have been undertaken to inquire into group identity and people's implicit bias in relation to those perceived as "other" are critically explored and their potential consequences reconsidered. The book also critically explores survey research, which, it is argued, can serve to reinforce the notion of the existence of ethnoracial groups with defined boundaries that inhere in social life. The book considers interviewing (including focus group interviewing) and case study research (including participant observation/ethnography) in terms of possibilities for moving beyond new forms of racism. Action research (defined by the understanding of an inextricable link between knowing and acting) is examined in-depth in terms of the hopes to "make a difference" at the moment of inquiry. Types of retroductive logic that are used to examine underlying structures that arguably unduly constrain people's life chances and render human relationships inhumane are also explored. The book draws together the different arguments; and it proposes ways in which the design of research into new racism can better be approached as well as ways in which dialogue around processes of inquiry and the products thereof can be better fostered. Suggestions for nurturing humane social relationships that provide for transcultural meaning-making are threaded through the text.

This book investigates the issue of cloze-validity as a measure of second language reading comprehension. It starts off by making a distinction between general reading ability and the more specific reading comprehension followed by a thorough review of the related research on L2 reading comprehension and sorting out the confusion in the literature in this categorization. A comprehensive account of cloze procedure is presented discussing its origin, different versions, its use for teaching and testing purposes, as well the latest research on cloze as measures of readability, language proficiency and second language reading. The book includes studies conducted at several stages on validating cloze as a measure of reading and interview and questionnaire techniques are applied to investigate the validity of eight cloze tests, criterion reading tests, and other cloze and reading tests in general. Two new cloze tests, i.e. reader-centered cloze test and phrase cloze test, are also introduced and researched as measures of reading ability. The book concludes with suggestions for developing tests that can better measure reading comprehension in light of recent research insights on the complex and dynamic nature of reading. This book will appeal to

researchers, lecturers and graduate and post-graduate students taking a course in Second Language Acquisition, Applied Linguistics, TESOL, Language Assessment, and Educational Measurement.

In this fascinating collection of Wall Street war stories, more than two dozen quants detail their roots, roles, and contributions, explaining what they do and how they do it, as well as outlining the sometimes unexpected paths they have followed from the halls of academia to the front lines of an investment revolution.
