Between 1887 and 1895, the British art student Miles Vancroft travelled around the world, sketching and painting the soldiers of the countries through which he passed. In this age of dramatic technological advancement, Vancroft was fascinated by how the rise of steam technology at the start of the American Civil War had transformed warfare and the role of the fighting man. This volume collects all of Vancroft's surviving paintings, along with his associated commentary on the specific military units he encountered. It is a unique pictorial guide to the last great era of bright and colourful uniforms, as well as an important historical study of the variety of steam-powered weaponry and equipment that abounded in the days before the Great War of the Worlds.

This new, extensively researched volume (volume two in the series) is a comprehensive guide to the history, development, wear, and use of uniforms and equipment during American military advisors involvement in the Vietnam War. Included are insignia, headgear, camouflage uniforms, modified items, Flak vests, boots, clothing accessories, paper items and personal items from the years 1957-1972, all examined in great detail. Using re-constructed and period photos, the author presents the look and appearance of American Army, Navy, and Marine Corps advisors in Vietnam. ARVN Ranger, Airborne, and ARVN infantry advisors, all have their own chapter, along with Junk Force, RAG Force, and South Vietnamese Naval and Marine Corps advisors.

In the years after World War I, the defeated and much-reduced German Army developed new clothing and personal equipment that drew upon the lessons learned in the trenches. In place of the wide variety of uniforms and insignia that had been worn by the Imperial German Army, a standardized approach was followed, culminating in the uniform items introduced in the 1930s as the Nazi Party came to shape every aspect of German national life. The outbreak of war in 1939 prompted further adaptations and simplifications of uniforms and insignia, while the increasing use of camouflaged items and the accelerated pace of weapons development led to the appearance of new clothing and personal equipment. Medals and awards increased in number as the war went on, with grades being added for existing awards and new decorations introduced to reflect battlefield feats. Specialists such as mountain troops, tank crews and combat engineers were issued distinctive uniform items and kit, while the ever-expanding variety of fronts on which the German Army fought – from the North African desert to the Russian steppe – prompted the rapid development of clothing and equipment for different climates and conditions. In addition, severe shortages of raw materials and the demands of clothing and equipping an army that numbered in the millions forced the simplification of many items and the increasing use of substitute materials in their manufacture. In this fully illustrated book noted authority Dr Stephen Bull examines the German Army's wide range of uniforms, personal equipment, weapons, medals and awards, and offers a comprehensive guide to the transformation that the German Army soldier underwent in the period from September 1939 to May 1945.

Field gear and inert weapons and ordnance have long been popular items with militaria collectors. The Vietnam War by its very nature offers an incredible range and variety of these items for the interested collector. The North Vietnamese and their puppet troops of the National Liberation Front (Viet Cong or VC) relied primarily on communist allies (Russia, China, North Korea, Cuba and various Eastern Bloc countries of the era) for their weapons and field gear. For this reason, Vietnam represents a microcosm of gear from all of this century's wars, dating

back to World War I, as well as a wide range of improvised weapons and equipment. Nowhere is this more apparent than in the variety of hand grenades used by the enemy, including Russian, Chinese, North Korean, Eastern European, French, Japanese and even modified, captured U.S. grenades. Although impossible to completely catalog the extreme variety of weapons and field gear used by the PAVN and VC, author Edward Emering has made a determined effort to present a wide overview of the weapons and field gear used from the late-1950s through the modern era. He has been aided in his goal by obtaining access to the world class collection of the National Vietnam Veterans Art Museum, located in Chicago, Illinois and by material from a number of extensive private collections. This book will help both the serious collector as well as those individuals interested in acquiring only a token piece of history to avoid potentially costly mistakes. A value guide is included.

The Second World War saw huge advancements in military tactics and technology occurring at an unprecedented pace. One such development was the employment of forces able to deploy at short notice by parachute across the globe, utilizing the opportunities created by the advancements in aeronautical technology. These forces were created to deliver an in-depth shock effect, and few have attracted more attention than Britain's famed Parachute Regiment. This formation was born from the humble beginnings of a fledgling unit drawn together from the British Army and Royal Air Force after Winston Churchill called for a new capability to be created following German airborne successes in the opening stages of the Second World War. Despite being initially poorly equipped, operating outdated aircraft and wearing clothing copied from captured German examples, the Parachute Regiment rapidly grew into what would become two complete airborne divisions – formations which played a key role in the destruction of the Axis forces. The equipment needed by these men rapidly changed as the war evolved and this is clearly illustrated in the author's fine and unique collection of rare airborne items from that period, several of them being the sole surviving items known to exist. The chronological historical information on Britain's paratroopers' role and development during the Second World War in this highly illustrated book is not only supported by a comprehensive and rare collection of items displaying the development and expansion of their equipment for each operation, but also by hundreds of original pictures which embrace the entire period. Additionally, the book also briefly covers the Polish Parachute Brigade and the Canadian parachute formations embedded into the British order of battle. This book provides a comprehensive pictorial display of Britain airborne forces which will prove to be a 'must have' tool for military history enthusiasts, airborne collectors, re-enactors and modelers,
